Greener Homes for the Future? Great Britain. Parliament. House of Commons. Environmental Audit Committee, 2008 This report examines three overarching issues the impact of the growth of house building targets what sort of homes should be built and where these homes should be built The Committee on Climate Change should assess the impact of the Government's new house building targets for three million new homes by 2020 on the UK's 2020 carbon reduction target In light of the latest economic projections fundamental changes in the mortgage market and falling house prices the Government should review the assumptions on which its target is based And the target for 2 million new homes to be built before the zero carbon target comes into effect in 2016 with a further 1 million to be built afterwards should change to increase significantly the proportion built afterwards Zero carbon homes must source their heat and power from renewable sources Ideally these will come from on site renewable power generation where this is impractical off site renewables should be built or funded The Government should ensure that an excess of land is not made available to developers something which is already leading to greenfield sites being developed in preference to brownfield sites The Government should urgently reintroduce a clear sequential test in favour of brownfield development into planning policy Greater emphasis ought to be placed on energy efficiency and sustainability within the building control regime that inspects new housing The Government should consider introducing higher penalties for developers who fail to meet energy efficiency standards The same environmental tests used for eco towns should be applied to all major housing developments from 2016 The Government should re-examine eco town proposals to ensure they have good public transport links and are located close to commercial centres and employment opportunities **Official Gazette of the United States Patent Office** United States. Materials David A. Cardwell,David S. Ginley,2003 With the advent of High Temperature Superconductivity and the increasing reliability of fabrication techniques superconductor technology has moved firmly into the mainstream of academic and industrial research There is currently no single source of practical information giving guidance on which technique to use for any particular category of superconductor An increasing number of materials scientists and electrical engineers require easy access to practical information sensible advice and guidance on best practice and reliable proven fabrication and characterisation techniques The Handbook will be the definitive collection of material describing techniques for the fabrication and analysis of superconducting materials In addition to the descriptions of techniques authoritative discussions written by leading researchers will give guidance on the most appropriate technique for a particular situation Characterisation and measurement techniques will form an important part of the Handbook providing researchers with a standard reference for experimental techniques The tutorial style description of these techniques makes the Handbook particularly suitable for use by graduate students The Handbook will be supported by a comprehensive web site which will be updated with new data as it emerges The Handbook has six main sections Fundamentals of Superconductivity characteristic properties elementary theory critical current of type II superconductors Processing bulk materials wires and tapes thick and thin films contact techniques Characterisation Techniques structure microstructure measurement and interpretation of electromagnetic properties measurement of physics properties Materials characteristic properties of low and high T_c materials Applications high current applications trapped flux devices high frequency devices josephson junction device

High Performance Control of AC Drives with Matlab/Simulink Haitham Abu-Rub,Atif Iqbal,Jaroslav

Guzinski,2021-05-11 High Performance Control of AC Drives with Matlab Simulink Explore this indispensable update to a popular graduate text on electric drive techniques and the latest converters used in industry The Second Edition of High Performance Control of AC Drives with Matlab Simulink delivers an updated and thorough overview of topics central to the understanding of AC motor drive systems The book includes new material on medium voltage drives covering state of the art technologies and challenges in the industrial drive system as well as their components and control current source inverter based drives PWM techniques for multilevel inverters and low switching frequency modulation for voltage source inverters This book covers three phase and multiphase more than three phase motor drives including their control and practical problems faced in the field e g adding LC filters in the output of a feeding converter are considered The new edition contains links to Matlab Simulink models and PowerPoint slides ideal for teaching and understanding the material contained within the book Readers will also benefit from the inclusion of A thorough introduction to high performance drives including the challenges and requirements for electric drives and medium voltage industrial applications An exploration of mathematical and simulation models of AC machines including DC motors and squirrel cage induction motors A treatment of pulse width modulation of power electronic DC AC converter including the classification of PWM schemes for voltage source and current source inverters Examinations of harmonic injection PWM and field oriented control of AC machines Voltage source and current source inverter fed drives and their control Modelling and control of multiphase motor drive system Supported with a companion website hosting online resources Perfect for senior undergraduate MSc and PhD students in power electronics and electric drives High Performance Control of AC Drives with Matlab Simulink will also earn a place in the libraries of researchers working in the field of AC motor drives and power electronics engineers in industry
