

# SCIENCE LESSON PLAN: BRIDGE

NAME: \_\_\_\_\_

DATE: \_\_\_\_\_

## OBJECTIVE

Students will work together to build a freestanding (not connected to anything for stability and without piers/support structures along the span) bridge that is at least -- cm. long. [Distance can be determined based on the materials being used and the age/grade of the students.]

## TESTING

Each group of students should describe their bridge design elements to the class and demonstrate that it is able to stand freely for a specific period of time. You can use blocks or books to create the space that must be crossed or you can use two desks that are a specific distance apart.

**Note:** Since some bridges are likely to fall apart if a load competition is held, it is recommended that photographs are taken of each of the bridges, from a variety of angles.

## MATERIALS

Be creative- choose supplies that are available to you and should be limited on budget. Popular materials for bridge building challenges are:

- Spaghetti noodles and marshmallows
- Newspaper and tape
- Cardboard and tape
- Toothpicks and gumdrops
- Popsicle sticks and glue
- Straws
- Other supplies that can be available include: scissors, meter stick

## REFLECTION

- Did your team build the bridge that was on the original design sheet? If no, what did you need to change?
- Which elements of your final design worked well?
- List materials or tools that you wish you would have had to make the bridge building process more successful.
- If you could change anything that your team did when responding to the challenge it would be: What was the best part of the bridge challenge?

**Who Are You Who Are So Wise in the Science of Teaching?** Rex R. Schultze J.D.,2021-02-10 Based upon years of reviewing the work product of building principal s evaluations of their teaching staff it has been evident to me there is a clear need to improve this critical aspect of school administration This book is designed to provide building principals and assistant principals with guidance on

- 1 the necessary preparation of the principal to be effective at guiding and coaching their staff
- 2 the laying of the foundation for their teachers to know the standard of performance expected by the school district as whole and the specific building where they serve
- 3 guide and teach their students
- 4 the teaching of their instructional staff what constitutes good lesson planning and instruction as defined by the educational model adopted by the school and art of teaching under that model
- 5 developing the skills for the writing of effective teacher formative and summative evaluations to assist in the improvement of instruction and

5 the work required in 1 to 4 above to establish and qualify the principal as an expert witness under the Rules of Evidence if he she is called upon to participate in the end game

of moving an underperforming teacher along The book is designed as a step by step process with reading assignments and self instruction tasks at the end of each chapter applying the concepts teaching supporting and assisting teachers in the science of teaching needed to develop maintain and excel at their craft It is shown scientifically that where teachers know the district s standards of performance student learning improves and students learn how to learn essential in today s ever changing society Being an effective building principal thus requires you to be an expert in your field i e that person who is rhetorically asked Who are you who are so wise in the science of teaching About the Author As you will surmise quickly in reading this book Rex Schultze has had the fortunate circumstance of being immersed in public education for his entire life from 1951 to the present as a teacher s and administrator s kid as a high school teacher for four years as the brother of an elementary school teacher and administrator and as a lawyer with a 40 year practice focused on public education both K 12 and community college levels As such he brings to you in Who are you who are so wise in the science of teaching a lifetime of perspective on the value of an education and particularly public education the most important equalizer of the citizens of our country and the need to grow support and nurture the best teachers possible Rex is a Boomer as in Baby Boomer OK Boomer an early version of that generation that grew up in the 50 s and 60 s so you will find references to the movies and music of those days throughout the book to add perspective and some fun Apologies in advance for the succeeding generations you can google the references a contribution by Rex to your personal history journey

**Science Learning, Science Teaching** Jerry Wellington,Gren Ireson,2012-12-06 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company

*Science Communication* Laura Bowater,Kay Yeoman,2012-12-26 Science communication is a rapidly expanding area and meaningful engagement between scientists and the public requires effective communication Designed to help the novice scientist get started with science communication this unique guide begins with a short history of science communication before discussing the design and delivery of an effective engagement event Along with numerous case studies written by highly regarded international contributors the book discusses how to approach face to face science communication and engagement activities with the public while providing tips to avoid potential pitfalls This book has been written for scientists at all stages of their career including undergraduates and postgraduates wishing to engage with effective science communication for the first time or looking to develop their science communication portfolio

**Teaching Science Students to Communicate: A Practical Guide** Susan Rowland,Louise Kuchel,2023-04-25 This highly readable book addresses how to teach effective communication in science The first part of the book provides accessible context and theory about communicating science well and is written by experts The second part focuses on the practice of teaching

communication in science with nuts and bolts lesson plans direct from the pens of practitioners The book includes over 50 practice chapters each focusing on one or more short teaching activities to target a specific aspect of communication such as writing speaking and listening Implementing the activities is made easy with class run sheets tips and tricks for instructors signposts to related exercises and theory chapters and further resources Theory chapters help build instructor confidence and knowledge on the topic of communicating science The teaching exercises can be used with science students at all levels of education in any discipline and curriculum the only limitation is a wish to learn to communicate better Targeted at science faculty members this book aims to improve and enrich communication teaching within the science curriculum so that science graduates can communicate better as professionals in their discipline and future workplace **Teachers Know What**

**Works** Keen J. Babbage, 2013-03-12 Education works better when teachers can concentrate on teaching and on students instead of concentrating on meticulous implementation of ever changing political reforms of education or on laborious implementation of increasingly bureaucratic mechanical procedures which are mandated by the education hierarchy This book explains realistic practical genuine ways to improve schools This book also examines ways not to improve schools including some of the common political bureaucratic top down efforts The book emphasizes that one significant factor in actions that actually improve education is that teacher input is sought and is applied Teachers based on their experiences know what works in the classroom with and for students Nothing else in education matters more **The Nature of Science**

Dorothy Warren, 2001 There are many different approaches to science Many students in school have a view of science that is far removed from the real world practice of science and they too often consider science to be a defined body of knowledge and scientists to know all the answers Through a series of exercises this book tries to give students an awareness of the processes of science and of the nature of science as a changing body of knowledge with uncertainties and much remaining to be discovered It is hoped that by using it teachers can communicate to their students some of the wonder and excitement of science and encourage the development of future generations of scientists The Nature of Science includes a range of activities designed to look at different aspects of the nature of science and to teach investigative skills to 11 19 year old students It contains teachers notes background information photocopiable student worksheets and answers Physical Education Technology Playbook

Darla M. Castelli, Leah Fiorentino, 2008 It is widely accepted that the increasing use of technology such as TV and computers has led to a reduction in physical activity But in Physical Education Technology Playbook authors Darla Castelli and Leah Holland Fiorentino show you how to use technology to increase physical activity and enhance learning about health and fitness This book comes with detailed instructions and examples so you can easily incorporate the described technologies into your teaching From cover **Special Education for All Teachers** Ron

Colarusso, Colleen M. O'Rourke, 2003-08 **The continuum of secondary science teacher preparation**, 2019-02-18 The mission of the Knowles Science Teaching Foundation KSTF to increase the quantity of high quality high school science and

mathematics teachers in United States High Schools calls for a deeper understanding of what it takes to prepare and support successful teachers. On September 21, 2006, KSTF convened a group of 41 individuals with a broad range of perspectives and expertise to address three essential questions with regard to secondary science teacher preparation: What do we know, what do we need to find out, and what research will help us fill in the gaps? Participants were intentionally selected from a diverse cross section of the education community and included teachers, educational researchers, teacher educators, policy specialists, and scientists. The 41 participants formed 12 working groups and spent two and a half days addressing the following aspects of teacher preparation: recruitment and retention, models of secondary science teacher preparation, pedagogic preparation including field-based experiences, methods courses, and preparing teachers for diverse populations, content preparation in biology, chemistry, Earth science, and physics, as well as the nature of science in general, induction, mentoring. Each working group was tasked with synthesizing their discussions and conclusions for the entire group of conference participants and in a written document. This volume represents the final outcome of that conference: 12 chapters that reflect the work of 40 dedicated scholars and practitioners who share a deep commitment to the pursuit of excellence in the preparation of secondary science teachers.
