## **One Giant Leap Apollo 11 Remembered:**

**One Giant Leap** Piers Bizony, 2009-05-01 The first moon landing in July 1969 captured the imagination of the world as no subsequent space spectacular has. Forty years later space historian Piers Bizony has produced a stunning visual record of this unparalleled mission. Drawing on high resolution images from the entire suite of Apollo 11's on board film magazines the book presents a complete picture of the mission: the launch, the astronauts' lives inside the spacecraft, the landing and moon walk, and finally the return to earth to worldwide acclaim. Accompanying these remarkable images, many published here for the first time, is Bizony's fascinating essay on the lasting cultural and emotional impact of the mission. Quotes from astronauts, scientists, and literary commentators add an extra dimension to Bizony's account. Apollo 11 may have happened a long time ago, Bizony remarks, but it casts an important shadow over today's generation. Can we live up to it and learn from it, or even repeat its achievements with new spacecraft? However tempting it might be to assume that our advanced modern society could go back to the moon, it is an unavoidable fact as this book makes clear that Apollo 11 was an event that may never be replayed. **One Giant Leap** gives modern readers the information and perspective for thinking about Apollo 11 and space exploration in general in an entirely new way.

**One Giant Leap** Charles Fishman, 2020-09-22 The New York Times bestselling meticulously researched and absorbingly written The Washington Post story of the trailblazers and the ordinary Americans on the front lines of the epic Apollo 11 moon mission. President John F. Kennedy astonished the world on May 25, 1961, when he announced to Congress that the United States should land a man on the Moon by 1970. No group was more surprised than the scientists and engineers at NASA, who suddenly had less than a decade to invent space travel. When Kennedy announced that goal, no one knew how to navigate to the Moon. No one knew how to build a rocket big enough to reach the Moon, or how to build a computer small enough and powerful enough to fly a spaceship there. No one knew what the surface of the Moon was like, or what astronauts could eat as they flew there. On the day of Kennedy's historic speech, America had a total of fifteen minutes of spaceflight experience, with just five of those minutes outside the atmosphere. Russian dogs had more time in space than US astronauts. Over the next decade, more than 400,000 scientists, engineers, and factory workers would send twenty-four astronauts to the Moon. Each hour of space flight would require one million hours of work back on Earth to get America to the Moon. On July 20, 1969, a veteran space reporter with a vibrant touch, nearly every sentence has a fact, an insight, a colorful quote, or part of a piquant anecdote. The Wall Street Journal and in **One Giant Leap** Fishman has written the sweeping definitive behind-the-scenes account of the furious race to complete one of mankind's greatest achievements. It's a story filled with surprises, from the item the astronauts almost forgot to take with them, the American flag, to the extraordinary impact Apollo would have back on Earth and on the way we live today. From the research labs of MIT, where the eccentric and legendary pioneer Charles Draper created the tools to fly the Apollo spaceships to the factories where dozens of women sewed spacesuits, parachutes, and even computer hardware by hand, Fishman captures the
