Dreams, Neuroscience, and Psychoanalysis Keramat Movallali, 2017-02-03 Dreams Neuroscience and Psychoanalysis sets out to give a scientific consistency to the question of time and find out how time determines brain functioning Neurological investigations into dreams and sleep since the mid 20th century have challenged our scientific conception of living beings On this basis Keramat Movallali reviews the foundations of modern neurophysiology in the light of other trends in this field that have been neglected by the cognitive sciences trends that seem to be increasingly confirmed by recent research The author begins by giving a historical view of fundamental questions such as the nature of the living being according to discoveries in ethology as well as in other research especially that which is based on the theory of the reflex It becomes clear in the process that these findings are consistent with the question of time as it has been considered in some major contemporary philosophies This is then extended to the domain of dreams and sleep as phenomena that are said to be elucidated by the question of time The question is then raised can dreaming be considered as a drive Based on the Freudian discovery of the unconscious and Lacan's teachings Movallali seeks to provide a better understanding of the drives in general and dreams in particular He explores neuroscience in terms of its development as well as its discoveries in the function of dreaming as an altered mode of consciousness The challenge of confronting psychoanalysis with neuroscience forces us to go beyond their division and opposition Psychoanalysis cannot overlook what has now become a worldwide scientific approach Neuroscience just like the cognitive sciences will be further advanced by acknowledging the desiring dimension of humanity which is at the very heart of its being as essentially related to the question of time It is

precisely this dimension that is at the core of psychoanalytic practice Dreams Neuroscience and Psychoanalysis will appeal to psychoanalysts and psychoanalytic psychotherapists as well as neuroscientists psychologists ethologists philosophers and advanced students studying across these fields

Forthcoming Books Rose Arny, 2003-04 **Toying with Childhood** Usha Mudiganti, 2022-02-27 This book studies the dialectic relationship between the image of the child and the toy in literary depictions of childhood in 19th and 20th century Anglo American fiction Drawing from the psychoanalytic theories of Sigmund Freud Anna Freud D W Winnicott and Sudhir Kakar it analyses themes such as the heterogeneity of childhood and the construction of the ideals of childhood It explores the linkages between the ideals of childhood in Britain and its travel to America and further dissemination in British India It discusses the established tropes of childhood such as innocence a formative period the centrality of play and the presence of a toy to argue that the mores of childhood are culturally constructed and lead to the reification of a child into an image of perfection The author problematises the notion of essential innocence and discusses the repercussions of such stereotypes

about childhood The work also highlights parallels between the ideals of childhood established in 19th century Britain and the portrayals of postcolonial Indian childhoods in 20th century Indian English literature *Toying with Childhood* will be useful for students and researchers of education childhood studies psychology sociology literature gender studies and development studies It will also appeal to general readers interested in cultural perceptions of childhood literary depictions of children and the works of Sigmund Freud *Whitaker's Books in Print* ,1998 Exploring Art for Perspective Transformation Alexis Kokkos,2021-05-12 We live in a socio cultural reality which is dominated by an entrepreneurial and instrumental rationality as well as by a discriminative and populist mentality Questioning the validity of taken for granted sovereign perspectives is thus of vital importance Our contact with art can serve as a pathway through which we might be empowered to identify false life values and develop the disposition and ability to challenge them The learning potential of aesthetic experience is however barely exploited within educational systems In addition although major scholars have contributed to a deeper understanding of the liberating dimension of processing important artworks there has been surprisingly little discussion in the relevant literature focusing on educational practice *Exploring Art for Perspective Transformation* provides a comprehensive analysis and synthesis of theoretical views pertaining to the emancipatory process of exploring art Moreover it presents the educational method Transformative Learning through Aesthetic Experience TLAE with reference to particular examples of implementation TLAE is addressed to adult educators and school teachers regardless of the subject they teach and their theoretical background on aesthetics It involves engaging learners in exploring works from fine arts literature theatre cinema and music with a view to promoting critical reflection on one s potentially problematic perspectives Unit Operations Ian Bogost,2008-01-25 In *Unit Operations* Ian Bogost argues that similar principles underlie both literary theory and computation proposing a literary technical theory that can be used to analyze particular videogames Moreover this approach can be applied beyond videogames Bogost suggests that any medium from videogames to poetry literature cinema or art can be read as a configurative system of discrete interlocking units of meaning and he illustrates this method of analysis with examples from all these fields The marriage of literary theory and information technology he argues will help humanists take technology more seriously and help technologists better understand software and videogames as cultural artifacts This approach is especially useful for the comparative analysis of digital and nondigital artifacts and allows scholars from other fields who are interested in studying videogames to avoid the esoteric isolation of game studies The richness of Bogost s comparative approach can be seen in his discussions of works by such philosophers and theorists as Plato Badiou Žižek and McLuhan and in his analysis of numerous videogames including *Pong* *Half Life* and *Star Wars Galaxies* Bogost draws on object technology and complex adaptive systems theory for his method of unit analysis underscoring the configurative aspects of a wide variety of human processes His extended analysis of freedom in large virtual spaces examines *Grand Theft Auto 3* *The Legend of Zelda* Flaubert s *Madame Bovary* and Joyce s *Ulysses* In *Unit Operations* Bogost not only

offers a new methodology for videogame criticism but argues for the possibility of real collaboration between the humanities and information technology
