Measuring The Universe The Cosmological Distance Ladder Springer Praxis S Space Exploration:

The Road to Galaxy Formation William C. Keel, 2002-09-20 Written by one of the leading authorities in the field this is one of the first books to describe one of today's most important problems in cosmology the formation of galaxies The book tackles this great puzzle by discusses the beginnings of the process from cosmological observations and calculations considers the broad features of galaxies that we need to explain and what we know of their later history The author compares the competing theories for galaxy formation and considers the progress expected from new generations of powerful telescopes both on earth and in space An intriguing text on one of today's greatest and most profound puzzles

The British National Bibliography Arthur James Wells, 2001 **American Book Publishing Record** R.R. Bowker Company, 1978 *The Irish Astronomical Journal*, 1998 **New Eyes on the Universe** Stephen Webb, 2012-05-19 New Eyes on the Universe Twelve Cosmic Mysteries and the Tools We Need to Solve Them gives an up to date broad overview of some of the key issues in modern astronomy and cosmology It describes the vast amount of observational data that the new generation of observatories and telescopes are currently producing and how that data might solve some of the outstanding puzzles inherent in our emerging world view Included are questions such as What is causing the Universe to blow itself apart What could be powering the luminous gamma ray bursters Where is all the matter in the Universe Do other Earths exist Is there intelligent life out there The renowned author explains clearly without recourse to mathematics why each question is puzzling and worthy of research Included in the study of the wide range of sensitive and powerful instruments used by scientists to try and solve these problems are ones which capture electromagnetic radiation and telescopes for cosmic rays neutrinos gravitational waves and dark matter This book discusses twelve areas of active astronomical research ranging from the nature of dark energy to the existence or otherwise of extraterrestrial civilizations and devotes one chapter to each topic Although astronomers tackle each of these questions using information gleaned from all possible wavelengths and sources and this is emphasized throughout the book in this work the author dedicates each chapter to a particular observational method One chapter covers X ray telescopes for investigating black holes while another uses infrared telescopes to learn more about planetary information
