## Measuring Up Biology Lesson 5:

*Does Measurement Measure Up?* John M. Henshaw, 2006-05-05 A critical perspective of how measurements have come to affect our lives from reasonable doubt to No Child Left Behind There was once a time when we could not measure sound color blood pressure or even time We now find ourselves in the throes of a measurement revolution from the laboratory to the sports arena from the classroom to the courtroom from a strand of DNA to the far reaches of outer space Measurement controls our lives at work at school at home and even at play But does all this measurement really measure up Here John Henshaw examines the ways in which measurement makes sense or creates nonsense Henshaw tells the controversial story of intelligence measurement from Plato to Binet to the early days of the SAT to today's super quantified world of No Child Left Behind He clears away the fog on issues of measurement in the environment such as global warming hurricanes and tsunamis and in the world of computers from digital photos to MRI to the ballot systems used in Florida during the 2000 presidential election From cycling and car racing to baseball tennis and track and field he chronicles the ever growing role of measurement in sports raising important questions about performance and the folly of comparing today's athletes to yesterday's records We can't quite measure everything at least not yet What could be more difficult to quantify than reasonable doubt However even our justice system is yielding to the measurement revolution with new forensic technologies such as DNA fingerprinting As we evolve from unquantified ignorance to an imperfect but everpresent state of measured awareness Henshaw gives us a critical perspective from which we can measure up the measurements that have come to affect our lives so greatly

**Discovery and Explanation in Biology and Medicine** Kenneth F. Schaffner, 1993 Kenneth F. Schaffner compares the practice of biological and medical research and shows how traditional topics in philosophy of science such as the nature of theories and of explanation can illuminate the life sciences While Schaffner pays some attention to the conceptual questions of evolutionary biology his chief focus is on the examples that immunology human genetics neuroscience and internal medicine provide for examinations of the way scientists develop examine test and apply theories Although traditional philosophy of science has regarded scientific discovery the questions of creativity in science as a subject for psychological rather than philosophical study Schaffner argues that recent work in cognitive science and artificial intelligence enables researchers to rationally analyze the nature of discovery As a philosopher of science who holds an M.D. he has examined biomedical work from the inside and uses detailed examples from the entire range of the life sciences to support the semantic approach to scientific theories addressing whether there are laws in the life sciences as there are in the physical sciences Schaffner's novel use of philosophical tools to deal with scientific research in all of its complexity provides a distinctive angle on basic questions of scientific evaluation and explanation
