

Chapter 1

Problems 1-1 through 1-4 are for student research.

1-5

Consider force F at G , reactions at B and D . Extend lines of action for fully-developed friction \overline{DE} and \overline{BE} to find the point of concurrency at E for impending motion to the left. The critical angle is θ_{cr} . Resolve force F into components F_{acc} and F_{cr} . F_{acc} is related to mass and acceleration. Pin accelerates to left for any angle $0 < \theta < \theta_{cr}$. When $\theta > \theta_{cr}$, no magnitude of F will move the pin.

Consider force F' at G , reactions at A and C . Extend lines of action for fully-developed friction $\overline{AE'}$ and $\overline{CE'}$ to find the point of concurrency at E' for impending motion to the left. The critical angle is θ'_{cr} . Resolve force F' into components F'_{acc} and F'_{cr} . F'_{acc} is related to mass and acceleration. Pin accelerates to right for any angle $0 < \theta' < \theta'_{cr}$. When $\theta' > \theta'_{cr}$, no magnitude of F' will move the pin.

The intent of the question is to get the student to draw and understand the free body in order to recognize what it teaches. The graphic approach accomplishes this quickly. It is important to point out that this understanding enables a mathematical model to be constructed, and that there are *two* of them.

This is the simplest problem in mechanical engineering. Using it is a good way to begin a course.

What is the role of pin diameter d ?

Yes, changing the sense of F changes the response.
