Nanotechnology and Photovoltaic Devices Jan Valenta, Salvo Mirabella, 2015-06-01 Silicon is an abundant element and is produced in large quantities for the electronic industry The falling price of this commodity also feeds the growth of solar photovoltaics PV However solar cells SCs based on bulk semiconductors have quite limited maximum attainable performance Therefore new principles and materials are being investigated

Silicon Nanophotonics Leonid Khriachtchev, 2016-10-26 Photonics is a key technology of this century The combination of photonics and silicon technology is of great importance because of the potentiality of coupling electronics and optical functions on a single chip Many experimental and theoretical studies have been performed to understand and design the photonic properties of silicon nanocrystals Generation of light in silicon is a challenging perspective in the field however the issue of light emitting devices does not limit the activity in the field Research is also focused on light modulators optical waveguides and interconnectors optical amplifiers detectors memory elements photonic crystals etc A particularly important task of silicon nanostructures is to generate electrical energy from solar light Understanding the optical properties of silicon based materials is central in designing photonic components It is not possible to control the optical properties of nanoparticles without fundamental information on their microscopic structure which explains a large number of theoretical works on this subject Many fundamental and practical problems should be solved in order to develop this technology In addition to open fundamental questions it is even more difficult to develop the known experimental results towards practical realization However the world market for silicon photonics is expected to be huge thus more research activity in the field of silicon nanophotonics is expected in the future This book describes different aspects of silicon nanophotonics from fundamental issues to practical devices The second edition is essentially different from the book published in 2008 Eight chapters of the first edition are not included in the new book because the recent progress on those topics has not been large enough Instead seven new chapters appear The other eight chapters are essentially modified to describe recent achievements in the field
