Nanotechnology In Mechanical Engineering:

Nanotechnology for Mechanical Engineers Gibin George, Raghav G. R., Jeetu S. Babu, 2025-06-19 This book exclusively aims to deliver a basic understanding of nanotechnology from a mechanical engineering perspective. It begins with the history and fundamentals of nanotechnology and comprehension of the relationship between the properties and the structure. A brief overview of the several techniques available for the synthesis of various nanostructures and the techniques for size control is provided in the subsequent section. Further, it demonstrates applications of nanostructured materials in the field that are closely related to mechanical engineering. Presents exclusive discussion and elaboration on the nanomaterials in varied aspects of mechanical engineering. Covers machining techniques for nanostructure manufacturing such as chemical grinding and additive manufacturing. Discusses advanced synthesis techniques of nanostructures and nanomaterials. Illustrates computational techniques relevant to mechanical properties of nanomaterials. Includes smart materials in the military, automobile, and aerospace applications. This book is aimed at researchers and graduate students in mechanical engineering and nanotechnology.

Sedimentation and Sediment Transport A. Gyr, Wolfgang Kinzelbach, 2003-05-31 It is evident that for a number of ecological and technical problems in rivers and lakes, a better knowledge of sediment transport and sedimentation is needed together with the ability to predict and simulate sediment behaviour. On the other hand, a stagnation of research in these topics could be observed in the last decades. At the Symposium, an attempt was made to present new results in mathematics and natural sciences relevant for the sediment problem. New strategies were discussed to tackle the complexity of the problem. Basic theoretical research and laboratory experiments alone are incomplete without a feedback from field observations and measurements. For that reason, well-known researchers from both basic and engineering sciences were invited. Turbulence, non-local phenomena, stability, interaction, feedback systems, self-organization, two-phase flow, and chaotic processes, numerical simulations, as well as measurement techniques and field results were the keywords of the Symposium. This proceedings are a good source for those interested in the state of the art.
