Canadiana, 1986 Math and the Mona Lisa Bulent Atalay, 2011-09-20 Leonardo da Vinci was one of history's true geniuses equally brilliant as an artist, scientist and mathematician. Readers of *The Da Vinci Code* were given a glimpse of the mysterious connections between math, science and Leonardo's art. *Math and the Mona Lisa* picks up where *The Da Vinci Code* left off, illuminating Leonardo's life and work to uncover connections that until now have been known only to scholars. Bulent Atalay, a distinguished scientist and artist, examines the science and mathematics that underlie Leonardo's work, paying special attention to the proportions, patterns, shapes and symmetries that scientists and mathematicians have also identified in nature. Following Leonardo's own unique model, Atalay searches for the internal dynamics of art and science, revealing to us the deep unity of the two cultures. He provides a broad overview of the development of science from the dawn of civilization to today's quantum mechanics. From this base of information, Atalay offers a fascinating view into Leonardo's restless intellect and *modus operandi*, allowing us to see the source of his ideas and to appreciate his art from a new perspective. Meisel, Jacob Speijer, 2006-03-28 **International Books in Print**, 1986 Reading for Evidence and Interpreting Visualizations in Mathematics and Science Education Stephen P. Norris, 2012-09-17. CRYSTAL Alberta was established to research ways to improve students' understanding and reasoning in science and mathematics. To accomplish this goal, faculty members in Education, Science and Engineering, as well as school teachers, joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the K-12 classroom. Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus. Combined with an emphasis on the use of visualizations, the instructional materials improve students' engagement with science and mathematics. Participation in the CRYSTAL Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher. I have learned how to better translate scientific knowledge into language and activities appropriate for students, thereby transforming my own teaching. I also have learned to make better connections between what students are learning and what is happening in their lives and the world, thereby increasing students' interest in the subject and enriching their learning experience.
