Semantic Web and Model-Driven Engineering Fernando S. Parreiras,2012-06-05 The next enterprise computing era will rely on the synergy between both technologies semantic web and model driven software development MDSD The semantic web organizes system knowledge in conceptual domains according to its meaning It addresses various enterprise computing needs by identifying abstracting and rationalizing commonalities and checking for inconsistencies across system specifications On the other side model driven software development is closing the gap among business requirements designs and executables by using domain specific languages with custom built syntax and semantics It focuses on using modeling languages as programming languages Among many areas of application we highlight the area of configuration management Consider the example of a telecommunication company where managing the multiple configurations of network devices routers hubs modems etc is crucial Enterprise systems identify and document the functional and physical characteristics of network devices and control changes to those characteristics Applying the integration of semantic web and model driven software development allows for 1 explicitly specifying configurations of network devices with tailor made languages 2 for checking the consistency of these specifications 3 for defining a vocabulary to share device specifications across enterprise

systems By managing configurations with consistent and explicit concepts we reduce cost and risk and enhance agility in response to new requirements in the telecommunication area This book examines the synergy between semantic web and model driven software development It brings together advances from disciplines like ontologies description logics domain specific modeling model transformation and ontology engineering to take enterprise computing to the next level **Compiler Construction** Shriram Krishnamurthi, Martin Odersky, 2007-07-02 This book constitutes the refereed proceedings of the 16th International Conference on Compiler Construction CC 2007 held in Braga Portugal in March 2007 as part of ETAPS 2007 the European Joint Conferences on Theory and Practice of Software The 15 revised full are organized in topical sections on architecture garbage collection and program analysis register allocation and program analysis **Testing of Communicating Systems** Ferhat Khendek, Rachida Dssouli, 2005-05-23 This book constitutes the refereed proceedings of the 17th IFIP TC 6 WG 6.1 International Conference on Testing Communicating Systems TestCom 2005 held in Montreal Canada in May/June 2005 The 24 revised full papers presented together with the extended abstract of a keynote talk were carefully reviewed and selected from initially 62 submissions The papers address all current issues in testing communicating systems ranging from classical telecommunication issues to general software testing **ECOOP - Object-Oriented Programming** Erik Ernst, 2007-07-27 The 21st European Conference on Object Oriented Programming ECOOP 2007 was held in Berlin Germany on July 30 to August 3 2007 ECOOP is the most important and inspiring forum in Europe and beyond for researchers practitioners and students working in that smorgasbord of topics and approaches known as object orientation This topic area was explored and challenged by excellent invited speakers two of which were the winners of this year's Dahl Nygaard award in the carefully refereed and selected technical papers on posters via demonstrations and in tutorials Each of the many workshops complemented this with a very interactive and dynamic treatment of more specific topics namely panels allowed for loud and lively disagreement Yet it is one of ECOOP's special qualities that this plethora of activities add up to a coherent and exciting whole rather than deteriorating into chaos The Program Committee received 161 submissions this year Only 135 of them were carried through the full review process because of a number of retractions and a number of submissions of abstracts that were never followed by a full paper However the remaining papers were of very high quality and we accepted 25 of them for publication Helping very good papers to be published is more useful than having an impressively low acceptance rate The papers were selected according to four groups of criteria whose priority depended on the paper relevance originality and significance precision and correctness and presentation and clarity Each paper had three four or five reviews depending on how controversial it was **Model-Driven Engineering and Software Development** Slimane Hammoudi, Luís Ferreira Pires, Bran Selic, Philippe Desfray, 2017-09-08 This book constitutes thoroughly revised and selected papers from the 4th International Conference on Model Driven Engineering and Software Development MODELSWARD 2016 held in Rome Italy in February 2016 The 17 thoroughly revised and extended papers presented in this volume were carefully

reviewed and selected from 118 submissions They are organized in topical sections named modeling languages tools and architectures methodologies processes and platforms applications and software development

Advances in Modeling Agricultural Systems Petraq Papajorgji, Panos M. Pardalos, 2009-02-28 Agriculture has experienced a dramatic change during the past decades The change has been structural and technological Structural changes can be seen in the size of current farms not long ago agricultural production was organized around small farms whereas nowadays the agricultural landscape is dominated by large farms Large farms have better means of applying new technologies and therefore technological advances have been a driving force in changing the farming structure New technologies continue to emerge and their mastery and use in requires that farmers gather more information and make more complex technological choices In particular the advent of the Internet has opened vast opportunities for communication and business opportunities within the agricultural community But at the same time it has created another class of complex issues that need to be addressed sooner rather than later Farmers and agricultural researchers are faced with an overwhelming amount of information they need to analyze and synthesize to successfully manage all the facets of agricultural production This daunting challenge requires new and complex approaches to farm management A new type of agricultural management system requires active cooperation among multidisciplinary and multi institutional teams and refining of existing and creation of new analytical theories with potential use in agriculture Therefore new management agricultural systems must combine the newest achievements in many scientific domains such as agronomy economics mathematics and computer science to name a few

Modeling with Rules Using Semantic Knowledge Engineering Grzegorz J. Nalepa, 2017-10-04 This book proposes a consistent methodology for building intelligent systems It puts forward several formal models for designing and implementing rules based systems and presents illustrative case studies of their applications These include software engineering business process systems Semantic Web and context aware systems on mobile devices Rules offer an intuitive yet powerful method for representing human knowledge and intelligent systems based on rules have many important applications However their practical development requires proper techniques and models a gap that this book effectively addresses

Engineering Agile Big-Data Systems Kevin Feeney,Jim Davies,James Welch,2022-09-01 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems

Managing Requirements Knowledge Walid Maalej,Anil Kumar Thurimella,2013-06-03 Requirements engineering is one of the most complex and at the same time most crucial aspects of software engineering It typically involves different stakeholders with different backgrounds Constant changes in both the problem and the solution domain make the work of the stakeholders extremely dynamic New problems are discovered additional information is needed alternative solutions are proposed several options are evaluated and new hands on experience is gained on a daily basis The knowledge needed to define and implement requirements is immense often interdisciplinary and constantly expanding It typically includes engineering management and collaboration information as well as psychological aspects and best practices This book discusses systematic means for managing requirements knowledge and its owners as valuable assets It focuses on potentials and benefits of lightweight modern knowledge technologies such as semantic Wikis machine learning and recommender systems applied to requirements engineering The 17 chapters are authored by some of the most renowned researchers in the field distilling the discussions held over the last five years at the MARK workshop series They present novel ideas emerging methodologies frameworks tools and key industrial experience in capturing representing sharing and reusing knowledge in requirements engineering While the book primarily addresses researchers and graduate students practitioners will also benefit from the reports and approaches

presented in this comprehensive work Application Development and Design: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2017-08-11 Advancements in technology have allowed for the creation of new tools and innovations that can improve different aspects of life These applications can be utilized across different technological platforms Application Development and Design Concepts Methodologies Tools and Applications is a comprehensive reference source for the latest scholarly material on trends techniques and uses of various technology applications and examines the benefits and challenges of these computational developments Highlighting a range of pertinent topics such as software design mobile applications and web applications this multi volume book is ideally designed for researchers academics engineers professionals students and practitioners interested in emerging technology applications

REST: From Research to Practice Erik Wilde, Cesare Pautasso, 2011-08-04 This volume provides an overview and an understanding of REST Representational State Transfer Discussing the constraints of REST the book focuses on REST as a type of web architectural style The focus is on applying REST beyond Web applications i e in enterprise environments and in reusing established and well understood design patterns when doing so The reader will be able to understand how RESTful systems can be designed and deployed and what the results are in terms of benefits and challenges encountered in the process Since REST is relatively new as an approach for designing Web Services the more advanced part of the book collects a number of challenges to some of the assumptions and constraints of REST and looks at current research work on how REST can be extended and applied to scenarios that often are considered not to be a good match for REST This work will help readers to reach a deeper understanding of REST on a practical as well as on an advanced level Transactions on Aspect-Oriented Software Development VI Shmuel Katz, Harold Ossher, 2009-10-26 work for small problems but it introduces significant accidental complexities when tackling larger problems

Not that the real challenge here is not how to design the system to take a particular aspect into account there is significant design know how in industry on this and it is often captured in the form of design patterns Taking into account more than one aspect can be a little harder but many large scale successful projects in industry provide some evidence that engineers know how different concerns should be handled The real challenge is reducing the effort that the engineer has to expend when grappling with many inter dependent concerns For example in a product line context when an engineer wants to replace a variant of an aspect used in a system she should be able to do this cheaply quickly and safely Manually weaving every aspect is not an option Unlike many models used in the sciences models in software and in linguistics have the same nature as the things they model In software this provides an opportunity to automatically derive software from its model that is to automate the weaving process This requires models to be formal and the weaving process be described as a program i e an executable meta model manipulating models to produce a detailed design The detailed design produced by the weaving process can ultimately be transformed to code or at least test suites
