

EXECUTIVE SUMMARY

Under the HIPAA Privacy and Security Rule, business associates are required to perform active risk prevention and safeguarding of patient information that are very important to patient privacy. The HITECH act allows only minimum necessary to be disclosed when handling protected health information (PHI).

This security risk assessment exercise has been performed to support the requirements of the Department of Health and Human Services (HHS), Office for the Civil Rights (OCR) and other applicable state data privacy laws and regulations. Upon completion of this risk assessment, a detail risk management plan need to be developed based on the gaps identified from the risk analysis. The gaps identified and recommendations provided are based on the input provided by the staff, budget, scope and other practical considerations.

RISK ASSESSMENT APPROACH

Our risk assessment approach is expected to identify only reasonably anticipated threats or hazards to the security or integrity of electronic Protected Health Information ("ePHI"). Assessing risks is only a first step. The results of the risk assessment have to be used to develop and implement appropriate policies and procedures. IT, management and support representatives have been interviewed in order to complete the risk assessment. Interviews, questionnaires and automated scanning tools are used for gathering information required for this security risk analysis. When mitigating significant risks, not all are equally important. Take into account the cost of intervention and the business impact of loss of confidentiality, integrity, or availability of data.

SCOPING

Please refer to the ePHI inventory sheet for the complete list of system hardware, software and other applications that are processing electronic Protected Health Information (ePHI). Scoping exercise is done on systems, processes and applications based ePHI data created, shared, stored and transmitted.

SYSTEM CHARACTERIZATION

Systems are characterized, including hardware (server, router, switch), software (e.g., application, operating system, protocol), system interfaces (e.g., communication link), data, and users based on ownership of the systems, ePHI processing and location of data.

THREAT STATEMENT

EHR 2.0 has conducted risk assessment to determine the extent of the potential threat and the risk associated with IT systems owned or operated by Company Name. To determine the likelihood of a future adverse event, threats to ePHI handled by Company Name Inc. are analyzed in conjunction with the potential vulnerabilities and the controls in place for the IT systems. EHR 2.0's assessment framework includes guidance from NIST, US-CERT, and other
