Sensors and Actuators Ilene J. Busch-Vishniac, 1998-12-30 Unlike other treatments of sensors or actuators this book approaches the devices from the point of view of the fundamental coupling mechanism between the electrical and mechanical behaviour The principles of operation of the solenoid are the same in both cases and this book thus treats them together It begins with a discussion of systems analysis as a tool for modelling transducers before turning to a detailed discussion of transduction mechanisms The whole is rounded off by an input output analysis of transducers Measurements, Modelling

and Simulation of Dynamic Systems Edward Layer, Krzysztof Tomczyk, 2009-12-30 The development and use of models of various objects is becoming a more common practice in recent days This is due to the ease with which models can be developed and examined through the use of computers and appropriate software Of those two the former high speed computers are easily accessible nowadays and the latter existing programs are being updated almost continuously and at the same time new powerful software is being developed Usually a model represents correlations between some processes and their interactions with better or worse quality of representation It details and characterizes a part of the real world taking into account a structure of phenomena as well as quantitative and qualitative relations There are a great variety of models Modelling is carried out in many diverse fields All types of natural phenomena in the area of biology ecology and medicine are possible subjects for modelling Models stand for and represent technical objects in physics chemistry engineering social events and behaviours in sociology financial matters investments and stock markets in economy strategy and tactics defence security and safety in military fields There is one common point for all models We expect them to fulfil the validity of prediction It means that through the analysis of models it is possible to predict phenomena which may occur in a fragment of the real world represented by a given model We also expect to be able to predict future reactions to signals from the outside world
