Mechanisms of Memory J. David Sweatt, 2003-11-18 This book stands as the first unified overview of the cellular and molecular mechanisms underlying higher order learning and memory It integrates modern discoveries concerning learning and memory disorders such as mental retardation syndromes and Alzheimer's Disease while also emphasizing the results gained from the cutting edge research methodologies of genetic engineering complex behavioral characterization proteomics and molecular biology This book provides a foundation of experimental design that will be useful to all students pursuing an interest in laboratory research This book is an enlightening and invaluable resource for anyone concerned with memory mechanisms Presents a unified view of memory mechanisms from behavior to genes and drawing examples from many different brain regions types of learning and various animal model systems Includes numerous practical examples for the new investigator on how to implement research program in the area of learning and memory Provides a balanced treatment of the strengths and weaknesses in modern experimental design

Neuronal Mechanisms of Memory Formation Christian Hölscher, 2000-11-06 Long term potentiation LTP is the most dominant model for neuronal changes that might encode memory LTP is an elegant concept that meets many criteria set up by theoreticians long before the model's discovery and also fits the anatomical data of learning dependent synapse changes Since the discovery of LTP the question has remained regarding how closely LTP produced in vitro by artificial stimulation of neurons actually models putative learning induced synaptic changes A number of recent investigations have tried to correlate synaptic changes observed after learning with changes produced by artificial stimulation of neurons Some of these studies have failed to find a correlation between the two forms of synaptic plasticity signalling a need to discuss the concept of LTP and possible alternate processes that could fit the available data This book presents a selection of ideas that range from supporters of the LTP theory to different novel concepts that have yet to be investigated This volume will prepare the ground for research in this area in the new millennium

Mechanisms of Memory J. David Sweatt, Eric Klann, Cristin Gavin, 2019-08 Mechanisms of Memory Third Edition is the only available comprehensive overview of the cellular and molecular mechanisms underlying higher order learning and memory Focusing on mechanisms relevant to hippocampus dependent memory formation the book progresses systematically from behavior to cellular physiology at molecular and genetic levels Moreover it integrates modern discoveries concerning learning and memory disorders from inherited disorders to aging and psychiatric disorders The book emphasizes results from the cutting edge of contemporary methodologies such as genetic engineering molecular biology complex behavioral characterization cellular physiology epigenetics and molecular structure This updated edition has been expanded to include eight new chapters covering the role of the prefrontal cortex in short term and working memory recent discoveries regarding the CNS dopamine system and its implications for reward based learning glial cell function in memory formation the role of altered protein synthesis in long term memory formation AMPA receptor trafficking and regulation and the role of
