L. Hutchison, 2007 Nanocharacterisation is a rapidly developing field Contributions in this book from across the globe provide an overview of the different microscopic techniques for the characterisation of nanostructures

Nano-society Michael Berger, 2009 Each of the chapters is based on a particular scientific paper that has been published in a peer reviewed journal and while each story revolves around one or two scientists who were interviewed for this book many if not most of the scientific accomplishments covered in the book are the result of collaborative efforts by several scientists and research groups often from different organizations and from different countries The book is different to other books in this field because it provides a novel human touch to nanotechnology research by not only covering a wide range of research topics but also the often nameless scientists behind this research The book is a collection of Spotlight articles from the popular Nanowerk website and each article has been crafted with the author's of a scientific paper and signed off by them prior to being posted on Nanowerk *Handbook of Nanoscopy, 2 Volume Set* Gustaaf van Tendeloo, Dirk van

Dyck, Stephen J. Pennycook, 2012-05-21 This completely revised successor to the Handbook of Microscopy supplies in depth coverage of all imaging technologies from the optical to the electron and scanning techniques Adopting a twofold approach the book firstly presents the various technologies as such before going on to cover the materials class by class analyzing how the different imaging methods can be successfully applied It covers the latest developments in techniques such as in situ TEM 3D imaging in TEM and SEM as well as a broad range of material types including metals alloys ceramics polymers semiconductors minerals quasicrystals amorphous solids among others The volumes are divided between methods and applications making this both a reliable reference and handbook for chemists physicists biologists materials scientists and engineers as well as graduate students and their lecturers *Nanoscience for the Conservation of Works of Art* Piero Baglioni, David Chelazzi, 2015-11-09 Understanding the chemistry behind works of art and heritage materials presents an opportunity to apply scientific techniques to their conservation and restoration Manipulation of materials at the nanoscale affords greater accuracy and minimal disturbance to the original work while efficiently combating the affects of time and environment This book meets the growing demand for an all encompassing handbook to instruct on the use of today s science on mankind s cultural heritage The editors have pioneered modern techniques in art conservation over the last four decades and have brought together expertise from across the globe Each chapter presents the theoretical background to the topic in question followed by practical information on its application and relevant case studies Introductory chapters present the science behind the physical composition of art materials Four chapters explore various cleaning techniques now followed by four chapters describing the application of inorganic nanomaterials Each chapter is fully referenced to the primary literature and offers suggestions for further reading Professional conservators and scientists alike will find this essential reading as will postgraduate students in the fields of materials and colloid science art restoration and nanoscience *Evolution's Destiny* Robert Joseph Paton Williams, Ros Rickaby, Rosalind E. M. Rickaby, 2012 This book demonstrates that biology and geochemistry have continually influenced each other in the co evolution of the Earth and all life **Nanoparticles in Anti-Microbial Materials** Fiona Regan, James Chapman, Timothy Sullivan, 2012-07-30 Many nanomaterials exhibit anti microbial properties and demand for such materials grows as new applications are found in such areas as medicine environmental science and specialised coatings This book documents the most up to date research on the area of nanoparticles showing anti microbial activity and discusses their preparation and characterisation Further materials showing potential anti microbial properties are also discussed With its user friendly approach to applications this book is an excellent reference for practical use in the lab Its emphasis on material characterisation will benefit both the analytical and materials scientist Frequent references to the primary literature ensure that the book is a good source of information to newcomers and experienced practitioners alike Chapters devoted to nanoparticles microbial impacts on surfaces and molecular biology are essential reading while chapters on characterisation ensure this book stands out in the field **A Laboratory Course in**

Nanoscience and Nanotechnology Gerrard Eddy Jai Poinern, 2014-12-06 Although there are many theoretical nanotechnology and nanoscience textbooks available to students there are relatively few practical laboratory based books Filling this need A Laboratory Course in Nanoscience and Nanotechnology presents a hands on approach to key synthesis techniques and processes currently used in nanotechnology and nanoscience

Near-infrared Nanomaterials Fan Zhang, 2016-08-05 In the last decade bioimaging and therapy based on near infrared NIR nanomaterials have played an important role in biotechnology due to their intrinsic advantages when compared with the traditional imaging probe and medicine NIR nanomaterials allow deeper penetration depth low detection threshold concentration and better targeted performance This book systematically summarises the recent progress in the fabrication and application of NIR nanomaterials for biomedical imaging and therapy and discusses the advantages challenges and opportunities available Near infrared Nanomaterials contains a chapter highlighting the outlook of these materials detailing novel ideas for the further application of NIR nanomaterials in bioimaging and medicine Written by leading experts working in the field this title will have broad appeal to those working in chemistry materials science nanotechnology biology bioengineering biomedical science and biophysics
