*Multiple Solution Methods for Teaching Science in the Classroom* Stephen DeMeo,2008 For the first time in science education the subject of multiple solution methods is explored in book form While a multiple method teaching approach is utilized extensively in math education there are very few journal articles and no texts written on this topic in science Teaching multiple methods to science students in order to solve quantitative word problems is important for two reasons First it challenges the practice by teachers that one specific method should be used when solving problems Secondly it calls into question the belief that multiple methods would confuse students and retard their learning Using a case study approach and informed by research conducted by the author this book claims that providing students with a choice of methods as well as requiring additional methods as a way to validate results can be beneficial to student learning A close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying to have students solve problems with understanding It is argued that conceptual understanding can be enhanced through the use of multiple methods in an environment where students can compare evaluate and verbally

discuss competing methodologies through the facilitation of the instructor This book focuses on two very useful methods proportional reasoning PR and dimensional analysis DA These two methods are important because they can be used to solve a large number of problems in all of the four academic sciences biology chemistry physics and earth science This book concludes with a plan to integrate DA and PR into the academic science curriculum starting in late elementary school through to the introductory college level A challenge is presented to teachers as well as to textbook writers who rely on the single method paradigm to consider an alternative way to teach scientific problem solving *Relevant Chemistry Education* Ingo Eilks, Avi Hofstein, 2015-07-22 This book is aimed at chemistry teachers teacher educators chemistry education researchers and all those who are interested in increasing the relevance of chemistry teaching and learning as well as students perception of it The book consists of 20 chapters Each chapter focuses on a certain issue related to the relevance of chemistry education These chapters are based on a recently suggested model of the relevance of science education encompassing individual societal and vocational relevance its present and future implications as well as its intrinsic and extrinsic aspects Two highly distinguished chemical educators Ingo Eilks and Avi Hofstein have brought together 40 internationally renowned colleagues from 16 countries to offer an authoritative view of chemistry teaching today Between them the authors in 20 chapters give an exceptional description of the current state of chemical education and signpost the future in both research and in the classroom There is special emphasis on the many attempts to enthuse students with an understanding of the central science chemistry which will be helped by having an appreciation of the role of the science in today s world Themes which transcend all education such as collaborative work communication skills attitudes inquiry learning and teaching and problem solving are covered in detail and used in the context of teaching modern chemistry The book is divided into four parts which describe the individual the societal the vocational and economic and the non formal dimensions and the editors bring all the disparate leads into a coherent narrative that will be highly satisfying to experienced and new researchers and to teachers with the daunting task of teaching such an intellectually demanding subject Just a brief glance at the index and the references will convince anyone interested in chemical education that this book is well worth studying it is scholarly and readable and has tackled the most important issues in chemical education today and in the foreseeable future Professor David Waddington Emeritus Professor in Chemistry Education University of York United Kingdom **Connecting with your future clients** , The Bulletin of the National Association of Secondary School Principals National Association of Secondary School Principals (U.S.), 1960 *Science & Engineering Indicators* , 1991
