**Handbook of Systemic Approaches to Psychotherapy Manuals** Mauro Mariotti, George Saba, Peter

Stratton, 2022-02-17 This handbook examines the development and use of manuals to guide and support systemic couples and family therapies. It addresses the process of manualizing, providing a secure base for therapist creativity rather than delineating prescriptive procedures. The volume addresses therapist and trainer concerns by demonstrating the value of sufficiently articulating clinical and teaching models to inform colleagues of what actually occurs during therapy. The book describes the history, value, and controversies of manuals. In addition, it explores issues and experiences in the creation of manuals, identifies research issues related to the use and evaluation of manuals, and addresses training as a context for the application of treatment manuals. Key areas of coverage include: Reports of experiences with major internationally established manuals; formulations of innovative practices by their developers and specifications of training programs; Discussion of the various formats of manuals demonstrating their benefit and transportability across different contexts; Surveys of a broad selection of manuals creating a flexible and diversified concept of what forms manuals may take; Essential guidance for using manuals, which is an indispensable step for the field to progress and to claim to health resource commissioning governments and insurance agencies that the systemic practice is evidence based and effective. The *Handbook of Systemic Approaches to Psychotherapy Manuals* is an essential resource for researchers, professors, and graduate students as well as clinicians and related therapists and professionals in clinical psychology, family studies, public health, social work, psychotherapy, child and adolescent psychology, and all interrelated disciplines.

*Mobile Networks for Biometric Data Analysis* Massimo Conti, Natividad Martínez Madrid, Ralf Seepold, Simone Orcioni, 2016-07-27 This book showcases new and innovative approaches to biometric data capture and analysis, focusing especially on those that are characterized by non-intrusiveness, reliable prediction algorithms, and high user acceptance. It comprises the peer-reviewed papers from the international workshop on the subject that was held in Ancona, Italy, in October 2014, and featured sessions on ICT for health care, biometric data in automotive and home applications, embedded systems for biometric data analysis, biometric data analysis, EMG and ECG, and ICT for gait analysis. The background to the book is the challenge posed by the prevention and treatment of common widespread chronic diseases in modern aging societies. Capture of biometric data is a cornerstone for any analysis and treatment strategy. The latest advances in sensor technology allow accurate data measurement in a non-intrusive way, and in many cases it is necessary to provide online monitoring and real-time data capturing to support a patient's prevention plans or to allow medical professionals to access the patient's current status. This book will be of value to all with an interest in this expanding field.

*Locomotion and Posture in Older Adults* Fabio Augusto Barbieri, Rodrigo Vítório, Paulo Cezar Rocha dos Santos, 2025-02-19 This book sheds new light on the effects of aging and movement disorders on movement control during walking and postural tasks. Understanding these dynamics is more important than ever as we face a future where the number of older adults is projected to double by 2050. The severity of this framework is exacerbated when aging is

accompanied by movement disorders such as Parkinson's disease, Chorea, Multiple Sclerosis, Dystonia, and Huntington's disease. The book explores how complex interactions between musculoskeletal and neural systems are required for efficient execution of daily activities like walking and maintaining posture. The chapters in this comprehensive volume address the multifaceted challenges posed by aging and movement disorders in gait and postural control, including innovative rehabilitation strategies and the role of artificial intelligence. Expert contributors examine how environmental, sensorial, motor, cognitive, and individual factors influence locomotor and postural activities. Readers will discover cutting-edge research findings that address critical questions about planning, performance, and impairment in these essential functions. This book is a must-read for anyone seeking to understand and reduce the effects of aging and movement disorders on gait and posture. This book is an invaluable resource for clinicians, physical therapists, occupational therapists, psychologists, biologists, researchers, health professionals, as well as those involved in physical education and sports medicine. It highlights the mechanisms involved in controlling and planning postural and gait tasks in both neurologically healthy older individuals and those who suffer from movement disorders, offering new perspectives on interventions and technologies designed to improve understanding or delay impairments due to aging or movement disorders on gait and posture. Whether you're a practitioner or researcher in related fields, this book equips you with the essential knowledge to enhance the quality of life for older adults facing these challenges.
