

MOTIVATION RECONSIDERED: THE CONCEPT OF COMPETENCE

ROBERT W. WHITE

Harvard University

When parallel trends can be observed in realms as far apart as animal behavior and psychoanalytic ego psychology, there is reason to suppose that we are witnessing a significant evolution of ideas. In these two realms, as in psychology as a whole, there is evidence of deepening discontent with theories of motivation based upon drives. Despite great differences in the language and concepts used to express this discontent, the theme is everywhere the same: Something important is left out when we make drives the operating forces in animal and human behavior.

The chief theories against which the discontent is directed are those of Hull and of Freud. In their respective realms, drive-reduction theory and psychoanalytic instinct theory, which are basically very much alike, have acquired a considerable air of orthodoxy. Both views have an appealing simplicity, and both have been argued long enough so that their main outlines are generally known. In decided contrast is the position of those who are not satisfied with drives and instincts. They are numerous, and they have developed many pointed criticisms, but what they have to say has not thus far lent itself to a clear and inclusive conceptualization. Apparently there is an enduring difficulty in making these contributions fall into shape.

In this paper I shall attempt a conceptualization which gathers up some of the important things left out by drive theory. To give the concept a name I have chosen the word *competence*, which is intended in a broad bio-

logical sense rather than in its narrow everyday meaning. As used here, competence will refer to an organism's capacity to interact effectively with its environment. In organisms capable of but little learning, this capacity might be considered an innate attribute, but in the mammals and especially man, with their highly plastic nervous systems, fitness to interact with the environment is slowly attained through prolonged feats of learning. In view of the directedness and persistence of the behavior that leads to these feats of learning, I consider it necessary to treat competence as having a motivational aspect, and my central argument will be that the motivation needed to attain competence cannot be wholly derived from sources of energy currently conceptualized as drives or instincts. We need a different kind of motivational idea to account fully for the fact that man and the higher mammals develop a competence in dealing with the environment which they certainly do not have at birth and certainly do not arrive at simply through maturation. Such an idea, I believe, is essential for any biologically sound view of human nature.

As a first step, I shall briefly examine the relevant trends of thought in several areas of psychology. From this it will become clear that the ideas advanced in this paper have already been stated, in one way or another, by workers in animal behavior, child development, cognitive psychology, psychoanalytic ego psychology, and the psychology of personality. If there is novelty in this essay, it lies in putting together

Motivation Reconsidered Robert Winthrop White, 1959

Dimensions of Psychology Gale B. Bishop, 1972

Motivating Humans Martin E. Ford, 1992-10-06 *Motivating Humans* represents an excellent integration of different motivational constructs. The main purpose of Ford's book and his theory, motivational systems theory (MST), is to provide an integrative and coherent model of motivation that synthesizes the various constructs from the different theories into one comprehensive framework. It represents an important addition to the knowledge base on motivation and will be generative of much future research. Moreover, the book presents the framework in a scholarly yet readable fashion that makes the book accessible to professional psychologists as well as graduate and undergraduate students. Paul R. Pintrich, in *Contemporary Psychology*, asks, "Why do people do the things they do?" In *Motivating Humans*, Ford answers this age-old question and offers the reader a precise and comprehensive description of the basic substance of human motivation: what it is, how it works, and how it impacts what people do and how well they do it. He also shows how classic and contemporary motivation theory in education, management, and psychology can be integrated into a coherent and unified framework called Motivational Systems Theory, from which he derives 17 principles for motivating humans. Different from any other motivation book, *Motivating Humans* presents numerous unique features: a variety of concrete examples to bridge the gap between abstract theory and the world of practical human affairs; an applications chapter that explores such issues as ways to promote social responsibility in youth, ways to increase work productivity and job satisfaction, and ways to increase learning and school achievement; the most up-to-date coverage of recent studies in motivation and pedagogical devices, including summary tables to help the reader digest and remember key information. Unique, comprehensive, and accessibly written, *Motivating Humans* will inspire a wide readership, including professors and students in psychology, management, education, developmental psychology, and clinical psychology. Class Tested: What the Students Say. The chart on the history of motivational theory, organized broadly by MST concepts, was extremely helpful in providing the reader with a look at the field in a glance. First and foremost, the fact that this is a legitimate psychological theory and I can understand it, having had very little other exposure to psychology, is a very strong aspect of the book. It refers to and explains a variety of psychological theories and principles without losing me. Also, any theory that seems to unify a large volume of disparate work is always attractive to me, especially if it does a good enough job surveying its predecessors, as I think the book does. Finally, I think that the summary of the LSF in chapter two was integral to the largeness or wide view of the book. It helped to tie in and explain the whole person approach to motivational theory. I really liked how MST emphasized the role of emotions in motivation and human action, where other theories had rationalized them. Emotions are very powerful, and I believe virtually impossible to explain away something that I think psychology does too readily. Motivational Systems Theory is the most comprehensive and compelling theory of human motivation which I have seen to date. Martin Ford has taken an impoverished and muddled field of

psychological inquiry and transformed it into a coherent and useful tool for explaining human behavior Chapter 6 is especially brilliant It gives an overview of all the major and most of the not so major theories and capitalizes on their similarities rather than their differences Most practitioners in schools and business recognize the value of motivating people and do so operating from their gut it is good to know that there is a workable and logical theory to put behind the practice and help refine it Chapter 7 is particularly helpful one could read this chapter and none others and still benefit Finally a book which will help educators turn their students on to learning It should be required reading for all classroom teachers Praise for this volume Motivating Humans by Martin Ford presents one of the most complete and comprehensive theories of human motivation yet to be proposed This is a significant work that is essential reading for all interested both in understanding motivation and in applying motivational principles in the workplace Robert J Sternberg Yale University Motivating Humans is a well thought out and well organized book that focuses on issues of motivation Educators in particular will be interested in this volume It utilizes a combination of logic and existing literature to build its case Martin Ford s work is creative yet analytic Motivating Humans will certainly stimulate some serious class discussion Gerald R Adams College of Family and Consumer Studies University of Guelph Ontario Canada Using a broad systems perspective Ford has skillfully organized a wide and all too often confusing array of advances in motivation theory and research Students researchers and practitioners in education and psychology should find this book most helpful in providing a clear and thought provoking introduction to the field Ruth Kanfer Department of Psychology University of Minnesota Motivating Humans contains a wealth of information from theory to application to help educators increase school learning and achievement Twenty five pages of bibliography alone make this book attest to its thoroughness A chapter of theories of motivation can only be regarded as definitive some 31 theories of motivation are described and arranged in a table format Ford regards facilitation not control as the guiding idea for motivating people an idea that fits nicely with the growing role of teacher as facilitator Wisely he offers no ready formula for facilitating motivation for there are no magic motivational buttons that can be pushed to make people want to learn work hard and act in a responsible manner But Ford does offer a comprehensive glimpse into the mechanism of motivation for those who are trying to find their own paths toward inspiring it It deserves the highest praise and the widest reading for its treatment of such a complex subject in such an accessible and thorough manner Motivating Humans should serve long as the standard source and reference on motivation Educational Leadership Psychoanalysis and Motivation Joseph D. Lichtenberg, 2013-06-17 Carrying forward his inquiry into the nature and conditions of normal and abnormal development Lichtenberg focuses on motivation His goal is to offer an alternative to psychoanalytic drive theory that accommodates the developmental insights of infancy research while accounting for the entire range of phenomena addressed by the theory of instinctual drives To this end he propounds a comprehensive theory of the self which then gains expression in five discrete yet interactive motivational systems COMPETENCY-BASED HUMAN RESOURCE MANAGEMENT

Promoting Motivation and Learning in Contexts Gregory Arief D. Liem, Dennis M. McInerney, 2020-06-01 The body of literature has pointed to the benefits of educational interventions in facilitating improvement in school motivation and by implication learning and achievement However it is now recognized that most extant motivation and learning enhancing intervention programs are grounded in Western motivational and learning perspectives such as attribution expectancy value implicit theories of intelligence self determination and self regulated learning theories Further empirical evidence for the positive impacts of these interventions seems to have primarily emerged from North American settings The cross cultural transferability and translatability of such educational interventions however are often assumed rather than critically assessed and adapted before their implementation in other cultures In this volume the editors invited scholars to re assess their intervention work from a sociocultural lens Regardless of the different theoretical perspectives and strategies they adopt in their interventions these scholars are in unison on the importance of taking into account sociodemographic backgrounds of the students and sociocultural contexts of the interventions to optimize the benefits of such interventions Indeed placing culture at the heart of designing implementing and evaluating educational interventions could be a key not only to strengthen the effectiveness and efficacy of educational interventions but also to ensure that students of a wider and more diverse range of educational and cultural backgrounds reap the benefits from such interventions This volume constitutes the foundation towards a deeper and more systematic understanding of culturally relevant and responsive educational interventions

Personality Research, Methods, and Theory Patrick E.

Shrout, Susan T. Fiske, 2014-04-04 Donald W Fiske's professional life and collaborations are themselves a textbook in the development of the field of personality. From the field's early origins in personnel selection, rating accuracy, and psychotherapy outcomes to its current status of theoretical and methodological maturity, complete with mid-life crises, the field has been fundamentally changed by Fiske's work, and the changes have influenced generations of scholars. This festschrift is a celebration of Fiske's impact but not merely of his impact on the history of personality research. Instead, the volume focuses on ongoing debates and issues that have been framed or influenced by Fiske's work. The festschrift's three sections are organized around three themes in Fiske's writings: themes that also correspond to three periods in his career. This volume examines current thinking about what can be known about personality; how constructs relevant to personality psychology are best measured; and how to approach specific research problems in personality and related fields. The contributors create an eminent cross-section of the development and current status of personality methods. In addition to Fiske's eminent contemporaries, the contributors to this volume include Fiske's former students, collaborators, and his two children, both of whom are behavioral scientists. The accomplishments of his students, colleagues, and children testify to the range of psychologists who have benefited from his scholarly and practical wisdom. This collection is a valuable textbook for an advanced graduate course as well as appealing as a scholarly resource. Many of the contributors are renowned psychological leaders who have made available their latest original thoughts. The book concludes with an essay by Fiske offering his perspective on the central themes: behavioral and social science, metatheory, methods, and strategies. **Well-Being** Marc H. Bornstein, Lucy Davidson, Corey L.M. Keyes, Kristin A. Moore, 2003-02-26 This volume derived from original presentations given at a conference in Atlanta, Georgia, under the auspices of the Center for Child Well-Being. Scholars, practitioners, public health professionals, and principals in the child development community convened to address a science-based framework for elements of well-being and how the elements might be developed across the life course. Integrating physical, cognitive, and social-emotional domains, *Well-Being* is the first scientific book to consider well-being holistically. Focusing on a set of core strengths grouped within these three domains, the book also includes a fourth section on developmental strengths through adulthood that broadly examines a continuum of health and development as well as transitions in well-being. This volume takes a developmental perspective across the life course, describing foundational strengths for well-being, the capacities that can be actively developed, supported, or learned. These foundational strengths: problem-solving, emotional regulation, and physical safety are the positive underpinnings of early child health and development as well as ongoing well-being across the life course. Working together and blending their respective disciplinary perspectives and expertise, 53 experts in psychology, sociology, child development, and medicine have contributed to the book. *Complex Psychological Trauma* Philip J. Understanding Personality through Projective Testing Steven Tuber, 2012-03-09 The past forty years have revealed a myriad of theoretical advances to Freud's original conceptions of the personality. It has also witnessed the continued use of projective methods as a vital means of understanding the what and the how of mental health and psychopathology. Understanding Personality Through Projective Testing provides the reader with a comprehensive framework for linking these revitalized key domains of personality functioning to the quality of responses to projective testing in both children and adults. Six core aspects of personality: two facets of object relations moving towards and away from self and others, the quality of defense mechanisms, the nature of affect, maturity, the integrity of autonomous ego functioning, and the capacity for playfulness are defined, articulated, and linked to one another in a reciprocal manner. Four commonly used projective testing methods: the Rorschach Inkblot Method, RIM, the Thematic Apperception Test (TAT), the Sentence Completion Test (SCT), and the Animal Preference Test (APT) are then described in detail. Each of these projective methods is in turn presented as dynamically based tools to indicate the relative performance of the patient across the six core personality domains. Clinical case examples provide both the beginning and more seasoned clinician with a comprehensive psychodynamic paradigm with which to view each of the testing methods as well as enhanced methods with which to use each of the tests more subtly and hence with greater clinical acumen. A comprehensive battery of projective testing is then assessed through the protocol of a single adult patient, allowing the reader to integrate the value of each of the individual projective methods into a comprehensive assessment of the whole person. Readers will find the book a vital complement to both standard reference works on projective methods as well as books that describe personality along developmental and psychodynamic lines.

Competence-based Vocational and Professional Education Martin Mulder, 2016-09-08 This book presents a comprehensive overview of extant literature on competence-based vocational and professional education since the introduction of the competence concept in the 1950s. To structure the field, the book distinguishes between three approaches to defining competence: based on 1 functional behaviourism, 2 integrated occupationalism, and 3 situated professionalism. It also distinguishes between two ways of operationalizing competence: 1 behaviour-oriented generic and 2 task-oriented specific competence. Lastly, it identifies three kinds of competencies related to 1 specific activities, 2 known jobs, and 3 the unknown future. Competence for the unknown future must receive more attention as our world is rapidly evolving and there are many global challenges which call for innovation and a profound transformation of policies and practices. The book presents a range of different approaches to competence-based education and demonstrates that competence-based education is a worldwide innovation which is institutionalized in various ways. It presents the major theories and policies, specific components of educational systems such as recognition, accreditation, modelling, and assessment, and developments in discipline-oriented and transversal competence domains. The book concludes by synthesizing the different perspectives with the intention to contribute to further improving
