*Geographic Information Science and Mountain Geomorphology* Michael Bishop, John F. Shroder, 2004-06-30 From the reviews Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology In doing so they have produced valuable first overall coverage of a high tech approach to mountain three dimensional research More than 40 contributing authors discuss a wide range of related aspects The book is well bound and well produced each chapter provides an extensive source of references The numerous line drawings are clearly reproduced although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images As is characteristic of many edited collections there is some variation in chapter quality Some of the writing is so dense that it requires minute concentration one chapter for instance has 14 pages of references from a total of 43 pages Nevertheless this is a vital compendium for a rapidly expanding field of research
