Superplasticity of Nanocrystalline Ni3Al Alloy and Nanocrystalline Ni Sam Xavier McFadden, 2001 **Thin Films** Dongfang Yang, Katherine Gibson, 2023-03-29 A thin film is a layer of material ranging from fractions of a nanometer to several micrometers in thickness Thin films have been employed in many applications to provide surfaces that possess specific optical electronic chemical mechanical and thermal properties Through ten chapters consisting of original research studies and literature reviews written by experts from the international scientific community this book covers the deposition and application of thin films Metals Abstracts, 1995 Properties and Applications of Silicon Carbide Rosario Gerhardt, 2011-04-04 In this book we explore an eclectic mix of articles that highlight some new potential applications of SiC and different ways to achieve specific properties Some articles describe well established processing methods while others highlight phase equilibria or machining methods A resurgence of interest in the structural arena is evident while new ways to

utilize the interesting electromagnetic properties of SiC continue to increase **Science Abstracts** ,1995 **Against the Grain** ,2003 *Physics Briefs* ,1992 **Materials Transactions, JIM.** ,1999-07 *Development of Novel Process for the Deposition of Nanostructured Ternary Alloys and Composites for Replacement of Cadmium Coatings* ,2003 The objective of this investigation was to develop novel processes for depositing ternary Zn Ni X X Cu or P alloys for replacement of Cd coatings in sacrificial protection of steel substrates Introducing small amounts of Cu in the Zn Ni plating bath results in alloys with reduced amount of Zn in the final deposit This alloy shows improved corrosion performance that is 4 times higher than that of Cd coatings Also the use of autocatalytic method was investigated to deposit amorphous Ni Zn P alloys The electroless Ni Zn P alloy shows improved corrosion performance that is 5 times higher than that of Cd coatings and reduces the hydrogen ingress into steel to 94% A novel electrolytic process was developed to deposit Ni Zn alloys with high Ni content Deposition parameters like pH and temperature were optimized based on composition and the surface morphology of the coating The Zn content in the coating was optimized based on the corrosion resistance of the final deposit Finally corrosion studies shows that Ni Zn coatings obtained using these methods show a 5 times increase in barrier resistance as compared to Cd coatings Also a mathematical model was developed to study the electroless Ni Zn P deposition

Electrodeposition Stojan S. Djokic,2010-07-20 In the past few decades research in the science of electrodeposition of metals has shown the important practical applications of electronic magnetic energy devices and biomedical materials The aim of this new volume is to review the latest developments electrodeposition and present them to teachers professionals and students working in the field **Crystallization of Ni-based Electroless Amorphous Alloys** T. Bagi,1980

Nano-plating (III) Tohru Watanabe,2022-11-12 Nano plating III Database of Plated Film Microstructures completes the trilogy of nanoplating books written by Tohru Watanabe Nanoplating I covers microstructure formation theory of plated films with Nanoplating II covering a metallurgical approach to electrochemical theory and its applications to technology This third installment shows the relationship between composition and microstructure of 27 pure metals and 55 alloy plating films including electrodeposition and electroless plating and provides a database of plated film microstructures The book presents readers with an efficient reference work that helps optimize their syntheses in order to obtain specific deposit types Provides a database of plated film microstructures Shows the relationship between composition and microstructure of 27 pure metals and 55 alloy plating films including electrodeposition and electroless plating Written by a real expert in the field who has over five decades of experience in metal electrodeposition and structural investigation **Electroless Deposition of Magnetic and Non-magnetic Ni Alloys for Microstructure Fabrication** Jeevan Kumar Vemagiri,Louisiana Tech University. Department of Electrical Engineering,2002 **Electroless Deposition of Nanolayered Metallic Coatings** Jothi Sudagar,2017 Electroless metallic coating is referred as the deposition of a substrate material by the process of chemical or autocatalytic reduction of aqueous metal ions deposited to a substrate material without any external supply of

power Electroless nickel alloys are generally considered synonymous to the word electroless coating as 90% of productions in industries are of this alloy coating Rest of the electroless metallic coatings includes gold copper palladium cobalt silver et cetera These electroless metallic coatings other than electroless nickel coatings are also one of the vibrant areas in the field of materials properties and surface engineering research From the year 2000 to till date nearly 1000 SCI indexed research papers were published on this topic However no comprehensive studies about the recent progress on this topic were reported elsewhere so far In this context the present chapter aims to give a complete overview on various aspects of the rest of the electroless metallic nanocoatings layer as a whole More importance will be on the recent developments of the nanocharacteristics and future scopes

New Trends in Alloy Development, Characterization and Application Zaki Ahmad, 2015-09-24 The book explores the new developments that have taken place in recent years in the processing and application of aluminium alloys The chapter on self diffusion shows a complete detail of the mechanism of diffusion in aluminium alloys and how it affects the strength The chapter on native oxide films gives useful information on the films developed on commercial magnesium alloys On the analytical side the details of Mossbauer spectroscopy related to aluminium alloys fully described One recent development in aluminium alloys is the controlling of pitting corrosion by the application of superhydrophobic coatings Complete details of the theory and application of hydrophobicity related to aluminium alloys is shown in the two chapters related to hydrophobicity It is hoped that this book will be found useful by researchers and general readers in the areas described in the book

Physical Fundamentals of Nanomaterials Bangwei Zhang, 2018-02-03 Physical Fundamentals of Nanomaterials systematically describes the principles structures and formation mechanisms of nanomaterials in particular the concepts principles and theories of their physical properties as well as the most important and commonly used preparation methods The book aims to provide readers with a basic understanding of how nanomaterials are synthesized as well as their resultant physical properties it therefore focuses on the science of nanomaterials rather than applications serving as an excellent starting point for researchers materials scientists and advanced students who already possess a basic knowledge of chemistry and physics Provides thorough coverage of the physics and processes involved in the preparation of nanomaterials Contains separate chapters for various types of synthesis methods including gas phase liquid phase solid phase and self assembly Coverage of properties includes separate chapters on mechanical thermal optical electrical and magnetic

Properties and Applications of Nanocrystalline Alloys from Amorphous Precursors Bogdan Idzikowski, Peter Švec, Marcel Miglierini, 2005-07-18 Metallic magnetic and non magnetic nanocrystalline materials have been known for over ten years but only recent developments in the research into those complex alloys and their metastable amorphous precursors have created a need to summarize the most important accomplishments in the field This book is a collection of articles on various aspects of metallic nanocrystalline materials and an attempt to address this above need The main focus of the papers is put on the new issues that emerge in the studies of

nanocrystalline materials and in particular on i new compositions of the alloys ii properties of conventional nanocrystalline materials iii modeling and simulations iv preparation methods v experimental techniques of measurements and vi different modern applications Interesting phenomena of the physics of nanocrystalline materials are a consequence of the effects induced by the nanocrystalline structure They include interface physics the influence of the grain boundaries the averaging of magnetic anisotropy by exchange interactions the decrease in exchange length and the existence of a minimum two phase structure at the atomic scale Attention is also paid to the special character of the local atomic ordering and to the corresponding interatomic bonding as well as to anomalies and particularities of electron density distributions and to the formation of metastable nanocrystalline or quasi crystalline phases built from exceptionally small grains with special properties Another important focus of attention are new classes of materials which are not based on new compositions but rather on the original and special crystalline structure in the nanoscale
