Pcg 21211m Manual:

PCG Reference Manual, 1995 PCG Preconditioned Conjugate Gradient package is a system for solving linear equations of the form $Au = b$ for A a given matrix and b and u vectors. PCG employing various gradient type iterative methods coupled with preconditioners is designed for general linear systems with emphasis on sparse systems such as these arising from discretization of partial differential equations arising from physical applications. It can be used to solve linear equations efficiently on parallel computer architectures. Much of the code is reusable across architectures and the package is portable across different systems; the machines that are currently supported are listed. This manual is intended to be the general purpose reference describing all features of the package accessible to the user; suggestions are also given regarding which methods to use for a given problem.
