Methods for

Fragments Screening Using Surface Plasmon Resonance Sameer Mahmood Zaheer,Ramachandraiah Gosu,2021-09-15

This volume describes methods and protocols for the fragment based screening of proteins using Surface Plasmon Resonance SPR The initial chapter of the book discusses the principle of SPR for the identification of biomolecular interactions while the subsequent chapters introduce methods for labelling proteins with different tags including histidine and biotin tags It also discusses techniques and factors that affect the amine and biotin streptavidin coupling and methods to optimize the interactions Next it describes fragment preparation for screening in SPR and presents methods to calculate equilibrium dissociation constant KD and ligand efficiency LE It reviews techniques of next generation injections that improve the efficiency of the characterization process over traditional SPR by determining the kinetics and affinity in a single step Finally the book elucidates a comprehensive yet representative description of challenges associated with the molecular interaction of proteins using SPR

Current Technologies in Plant Molecular Breeding Hee-Jong Koh,Suk-Yoon Kwon,Michael

Thomson,2015-08-26 Recent progress in biotechnology and genomics has expanded the plant breeders horizon providing a molecular platform on the traditional plant breeding which is now known as plant molecular breeding Although diverse technologies for molecular breeding have been developed and applied individually for plant genetic improvement common use in routine breeding programs seems to be limited probably due to the complexity and incomplete understanding of the technologies This book is intended to provide a guide for researchers or graduate students involved in plant molecular breeding by describing principles and application of recently developed technologies with actual case studies for practical use The nine topics covered in this book include the basics on genetic analysis of agronomic traits methods of detecting QTLs the application of molecular markers genomics assisted breeding including epigenomic issues and genome wide association studies Identification methods of mutagenized plants actual case studies for the isolation and functional studies of genes the basics of gene transfer in major crops and the procedures for commercialization of GM crops are also described This book would be a valuable reference for plant molecular breeders and a cornerstone for the development of new technologies in plant molecular breeding for the future
