**Listening with Two Ears - New Insights and Perspectives in Binaural Research** Huiming Zhang, Yi Zhou, Lina Reiss, 2023-11-27 Hearing is dependent on neural processing of acoustic cues obtained by the left and right ears. Neural signals driven by the two ears are integrated at multiple levels of the central auditory system, which enables animals, including humans, to perform various functions, including localization of a sound source. A natural listening environment typically contains sounds from multiple sources. These sounds can have different spectral and temporal features and occur at either the same or different time. Integration can happen among neural signals elicited by the same or different sounds. The way of integration can greatly affect how individual sounds are sensed and perceived. Functions such as auditory grouping and stream segregation, which are central to establishing coherent auditory images in a complex listening environment, are highly dependent on the way of integration. Binaural hearing is complicated by individual differences and developmental changes in head and pinna shape, size, as binaural cues can be affected by these differences and changes. Furthermore, neural processing of binaural cues can be influenced by hearing impairments and the use of hearing aids and cochlear implants. These factors likely require a listener to optimize the use of binaural cues through learning and to use plastic changes in the nervous system to perform the optimization. Great strides have been made in understanding binaural processing in normal and impaired auditory systems. This Research Topic aims to highlight some of the latest findings in the following areas: 1. Animal behavioral and human psychoacoustical studies of binaural hearing; 2. Neural encoding and processing of binaural cues and structural as well as neurophysiological bases of such encoding and processing; 3. Contribution of binaural neural processing to auditory functions such as sound source localization, binaural fusion, binaural interference, spatial release from masking, auditory grouping, and auditory stream segregation; 4. Computational models of

binaural processing 5 Learning and plastic changes in binaural processing following hearing loss or alterations of acoustic environment and structural as well as physiological bases of these behavioral changes 6 Clinical aspects of binaural processing including application of processing strategies including research on the benefits of bilateral cochlear implantation and the neural correlates thereof      *Posterior Reversible Encephalopathy Syndrome and Associated Diseases* Bo Gao,Stephane Legriel,Alexander Lerner,Max Wintermark,Jeffrey Bruce Rykken,2020-10-28 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact

*Advances and controversies in ischemic stroke management: from prevention to diagnosis and acute treatment* Matteo Foschi, Raffaele Ornello, Lucio D'Anna, Giovanni Merlino, 2025-09-25 Stroke is a leading cause of mortality and the primary cause of disability worldwide with ischemic stroke accounting for approximately 70% of all cases globally Recent advancements in brain imaging techniques have significantly expanded the treatment window for reperfusion therapies in carefully selected patients resulting in improved functional outcomes in the short and long term Intravenous thrombolysis IVT has proven effective in reducing disability when administered for up to 9 hours in patients with detectable salvageable brain tissue on perfusion imaging Endovascular thrombectomy EVT has emerged as a beneficial intervention for a wide range of patients with large vessel occlusion even up to 24 hours after stroke onset provided appropriate patient selection based on imaging criteria Conversely recent trials have demonstrated the superior efficacy of intensive pharmacological approaches such as dual antiplatelet therapy DAPT in preventing ischemic stroke recurrence particularly in high risk patients Despite significant advancements several controversies persist in the field of ischemic stroke management These controversies encompass various topics including determining the optimal secondary prevention strategy for patients with patent foramen ovale or strategies for ischemic stroke prevention in patients with atrial fibrillation following intracerebral hemorrhage Furthermore ongoing debates exist regarding the actual effectiveness of EVT in patients with large ischemic core distal vessel occlusion

mild stroke syndromes or high baseline disability Additionally the comparative utility of IVT versus dual antiplatelet therapy for minor ischemic strokes remains a contentious issue Moreover discussions revolve around identifying the optimal delivery paradigm for EVT such as the choice between the drip and ship approach versus the mothership model Therapeutic Agents and Targets to Minimize Ischemic Brain Injury Bruno Meloni,Thiruma Valavan Arumugam,Rajiv Ram Ratan,Geoffrey Alan Donnan,Emmanuel Pinteaux,2021-11-30 BM would like to declare that he has filed patents for the application of arginine rich peptide as neuroprotective agents for stroke and other neurological disorders RRR patents licensed by Neuronasal Inc a company that he also consults for and has equity interest in All other Topic Editors declare no competing interests with regards to the Research Topic subject Best of Five MCQs for the Acute Medicine SCE Nigel Lane,Louise Powter,Sam Patel,2016-03-17 Best of Five MCQs for the Acute Medicine SCE is a new revision resource designed specifically for this high stakes exam Containing over 350 Best of Five multiple choice questions this dedicated guide will help candidates to prepare successfully The content mirrors the SCE in Acute Medicine Blueprint to ensure candidates are fully prepared for all the topics that may appear in the exam Topics range from how to manage acute problems in cardiology or neurology to managing acute conditions such as poisoning All answers have full explanations and further reading to ensure high quality self assessment and quick recognition of areas that require further study **Performance and Participation Outcomes for Individuals With Neurological Conditions** Naomi Josman,Lisa Tabor Connor,David Jing-Piao Lin,2020-12-03 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact Geriatric Neurology Anil K.
