Nineteen Eighty-Four: Science Between Utopia and Dystopia E. Mendelsohn,H. Nowotny,2012-12-06 Just fifty years ago Julian Huxley the biologist grandson of Thomas Henry Huxley published a book which easily could be seen to represent the prevail ing outlook among young scientists of the day If I were a Dictator 1934 The outlook is optimistic the tone playfully rational the intent clear allow science a free hand and through rational planning it could bring order out of the surrounding social chaos He complained however At the moment science is for most part either an intellectual luxury or the paid servant of capitalist industry or the nationalist state When it and its results cannot be fitted into the existing framework it and they are ignored and furthermore the structure of scientific research is grossly lopsided with over emphasis on some kinds of science and partial or entire neglect of others pp 83 84 All this the scientist dictator would set right A new era of scientific human ism would provide alternative visions to the traditional religions with their Gods and the civic religions such as Nazism and fascism Science in Huxley s version carries in it the twin impulses of the utopian imagination Power and Order Of course it was exactly this vision of science which led that other grand son of Thomas Henry Huxley the writer Aldous Huxley to portray scientific discovery as potentially subversive and scientific practice as ultimately en slaving

The World Yearbook of Robotics Research and Development Sbornik Statei,2013-04-17 How quickly the technological flavour of the month changes At the beginning of the 1980 s many saw robotics as being something of a pana cea for those problems in the manufacturing industries which had been exacerbated by the world recession Those working at the time in the field of robotics stressed that robots themselves were only part of the solution Yet in many quarters the hype for the new technology apparently knew few bounds resulting inexorably in many industries painfully discover ing for themselves a new realism

closely followed by disillusionment In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate

Science, History and Social Activism Garland E. Allen, Roy M. MacLeod, 2013-03-14 To earn a degree every doctoral candidate should go out to Harvard Square find an audience and explain his or her dissertation Everett Mendelsohn s worldly advice to successive generations of students whether apocryphal or real has for over forty years spoken both to the essence of his scholarship and to the role of the scholar Possibly no one has done more to establish the history of the life sciences as a recognized university discipline in the United States and to inspire a critical concern for the ways in which science and technology operate as central features of Western society This book is both an act of homage and of commemoration to Professor Mendelsohn on his 70th birthday As befits its subject the work it presents is original comparative wide ranging and new Since 1960 Everett Mendelsohn has been identified with Harvard University and with its Department of the History of Science Those that know him as a teacher will also know him as a scholar In 1968 he began and after 30 years has just bequeathed to others the editorship of the Journal of the History of Biology among the earliest and one of the most important publications in its field At the same time he has been a pioneer in the social history and sociology of science He has formed particularly close working relationships with colleagues in Sweden and Germany as witnessed by his editorial presence in the Sociology of Science Yearbook

Utopia: Social Theory and the Future Keith Tester, Michael Hviid Jacobsen, 2016-02-17 In the light of globalization s failure provide the universal panacea expected by some of its more enthusiastic proponents and the current status of neo liberalism in Europe a search has begun for alternative visions of the future alternatives to the free market and to rampant capitalism Indeed although these alternatives may not be conceived of in terms of being a perfect order there does appear to be a trend towards utopian thinking as people including scholars and intellectuals search for inspiration and visions of better futures If as this search continues it transpires that politics has little to offer then what might social theory have to contribute to the imagination of these futures Does social theory matter at all What resources can it offer this project of rethinking the future Without being tied to any single political platform Utopia Social Theory and the Future explores some of these questions offering a timely and sustained attempt to make social theory relevant through explorations of its resources and possibilities for utopian imaginations It is often claimed that utopian

thought has no legitimate place whatsoever in sociological thinking yet utopianism has remained part and parcel of social theory for centuries As such in addition to considering the role of social theory in the imagination of alternative futures this volume reflects on how social theory may assist us in understanding and appreciating utopia or utopianism as a special topic of interest a special subject matter a special analytical focus or a special normative dimension of sociological thinking Bringing together the latest work from a leading team of social theorists this volume will be of interest to sociologists social and political theorists anthropologists and philosophers

The Ends Of Science Harry Redner,2019-07-11 In this path breaking and controversial book Harry Redner provides a systematic study of how the epistemologically interesting features of contemporary science are to be understood Taking science to include knowledge from the social sciences and humanities as well as the physical sciences Redner shows how the history of science philosophical theory and current scientific research reveal connections between scientific developments and features of the social organization of science Redner argues that the shift from Classical science to a more complex and less orderly World science after World War II has changed the way scientific research is done and how its knowledge is organized His aim however is not merely to interpret science but to change it Thus this examination is more than a survey and critique it is a positive program for the development of future science Remarkable for its breadth and insight the book is especially valuable for its discussions of authority and social organization with the accompanying themes of academic politics competition power and corruption and for its catalog of the various contemporary critiques of science Some of these are European in origin and will be new to many U S readers A tour de force on several levels this book is essential reading for scientists philosophers sociologists of science historians of ideas critics of contemporary culture and indeed for anyone who takes a serious interest in scientific research and higher learning

The Social Construction of Technological Systems, anniversary edition Wiebe E. Bijker,Thomas Parke Hughes,Trevor Pinch,2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way

Imagined Democracies Yaron Ezrahi,2012-10-15 In our era of mass

electronic communications political realities are produced by believable fictions that echo popular desires *The Cambridge History of Political Thought 1450-1700* James Henderson Burns, Mark Goldie, 1991 This book first published in 1992 presents a comprehensive scholarly account of the development of European political thinking through the Renaissance and the reformation to the scientific revolution and political upheavals of the seventeenth century It is written by a highly distinguished team of contributors Cosmogony Lucy Ives, 2021-03-09 An energetic witty collection of stories where the supernatural meets the anomalies of everyday life deception infidelity lost cats cute memes amateur pornography and more There are analogies between being female and being left handed I think or being an animal A woman answers a Craigslist ad to write erotic diaries for money A woman walks onto a tennis court from her home at the bottom of the ocean A woman goes to the supermarket and meets a friend's husband who happens to be an immortal demon A woman goes for a run and accidentally time travels Cosmogony takes accounts of so called normal life and mines them for inconsistencies deceptions and delights Incorporating a virtuosic range of styles and genres Wikipedia entry phone call physics equation encounters with the supernatural these stories reveal how the narratives we tell ourselves and believe are inevitably constructed offering a glimpse of the structures that underlie and apparently determine human existence Artificial Intelligence Ronald Chrisley, Sander Begeer, 2000 **Collection Of Essays On Complexity And Management, A - Proceedings Of The Summer School On Managerial Complexity** Walter Baets, 1999-04-01 A tendency exists in management theory and practice today to accept that our linear and deterministic ways of thinking about managerial problems create more problems than they solve In the field of strategy studies for instance one can observe a growing interest in learning and organisational flexibility IT gives importance to distributed cognition and adaptive systems Management theorists are keenly observing developments surrounding complexity and chaos theory in science and management researchers are attempting to apply emerging theories to managerial problems Although there are still a limited number of applications in the managerial world the Santa Fe Institute and the Los Alamos Center for Nonlinear Studies both in the US have been active for several years in closely related fields and more important adopt a multidisciplinary approach Such applied research is seldom present in academic management journals It seems however that the business community is interested in the implications of chaos and complexity for management as well as adopting a multidisciplinary approach to strategy and organisational change This volume constituting the proceedings of the Summer School on Managerial Complexity held in Granada Spain on 11-25 July 1998 will benefit students and researchers in chaos and dynamical systems **Designs on Nature** Sheila Jasanoff, 2011-06-27 Biology and politics have converged today across much of the industrialized world Debates about genetically modified organisms cloning stem cells animal patenting and new reproductive technologies crowd media headlines and policy agendas Less noticed but no less important are the rifts that have appeared among leading Western nations about the right way to govern innovation in genetics and biotechnology These significant differences in law and

policy and in ethical analysis may in a globalizing world act as obstacles to free trade scientific inquiry and shared understandings of human dignity In this magisterial look at some twenty five years of scientific and social development Sheila Jasanoff compares the politics and policy of the life sciences in Britain Germany the United States and in the European Union as a whole She shows how public and private actors in each setting evaluated new manifestations of biotechnology and tried to reassure themselves about their safety Three main themes emerge First core concepts of democratic theory such as citizenship deliberation and accountability cannot be understood satisfactorily without taking on board the politics of science and technology Second in all three countries policies for the life sciences have been incorporated into nation building projects that seek to reimagine what the nation stands for Third political culture influences democratic politics and it works through the institutionalized ways in which citizens understand and evaluate public knowledge These three aspects of contemporary politics Jasanoff argues help account not only for policy divergences but also for the perceived legitimacy of state actions

Boston Studies in the Philosophy of Science, 2001 *The Visual Language of Technique* Luigi Cocchiarella, 2015-03-14 The book is inspired by the first seminar in a cycle connected to the celebrations of the 150th anniversary of the Politecnico di Milano Dealing with the Image Ivory Towers and Virtual Bridges was the motto of this meeting aiming to stimulate a discussion among engineers designers and architects all of whom are traditionally involved in the use of the Image as a specialized language supporting their work their research activities and their educational tasks The book will also include the essays of invited or interviewed authors from other disciplines namely Philosophy Mathematics and Semiotics According to Régis Debray in the present Visual Age which he has significantly defined as a Video Sphere all the information tends to be processed and controlled by means of visual devices This occurs especially in the various branches of many technical studies and activities one of the most sensitive areas to the use of Visual Language in the past and even more in the present

Power, Autonomy, Utopia R. Trappl, 2012-12-06 The world is becoming more and more intractable We have learned to discern systems in it we have developed a highly sophisticated mathematical apparatus to model them large computer simulation programs handle thousands of equations with zillions of parameters But how adequate are these efforts Part One of this volume is a discussion containing some proposals for eliminating the constraints we encounter when approaching complex systems with our models Is it possible at all to design a political or economic system without considering killing torture and oppression Can we adequately model the present state of affairs while ignoring their often symbolic and paradoxical nature Is it possible to explain teleological concepts such as means and ends in terms of basically 17th century Newtonian mechanics Can we really make appropriate use of the vast amount of systems concepts without exploring their relations without developing a system of systems concepts And why do more than 95% of all system modelling efforts end in just a heap of printed paper and nothing else Leading scientists from different disciplines who have different viewpoints and use very different styles in presenting their message were invited to present their approaches to

these and to other problems of equal importance Either as Plenary Lectures at the Seventh European Meeting on Cybernetics and Systems Research at the University of Vienna Austria Professors Stafford Beer Helga Nowotny and Robert Rosen Ross Ashby Memorial Lecture or as Invited Lectures to the Austrian Society **Liberty, Authority, Formality** John Morrow, 2012-03-26 The essays in this volume are all inspired by the historical scholarship of J C Davis During a prolific career Davis has transformed our understanding of early modern utopian literature and its contexts and compelled students of seventeenth century English to re evaluate the significance of movements and individuals who have had a prominent place in the historiography of the English Revolution Davis s analyses of groups like the Levellers and individuals like Gerrard Winstanley and Oliver Cromwell has reoriented the inquiry around the contemporary moral themes of liberty authority and formality around which concepts this volume engages **Science, Politics and Morality** R. von Schomberg, 2013-06-29 Current environmental problems and technological risks are a challenge for a new institutional arrangement of the value spheres of Science Politics and Morality Distinguished authors from different European countries and America provide a cross disciplinary perspective on the problems of political decision making under the conditions of scientific uncertainty cases from biotechnology and the environmental sciences are discussed The papers collected for this volume address the following themes i controversies about risks and political decision making ii concepts of science for policy iii the use of social science in the policy making process iv ethical problems with developments in science and technology v public and state interests in the development and control of technology **Aufbruch und Zerstörung** Wolfgang L.
