Manufacturing and Industrial Engineering Pankaj Agarwal,Lokesh Bajpai,Chandra Pal Singh,Kapil Gupta,J. Paulo Davim,2021-09-28 In terms of pioneering and latest technologies present day advancements in manufacturing and industrial engineering are required to attend to the accelerated and simultaneous demands of high quality productivity and sustainability This book fulfils the aforementioned obligations by offering unique comprehensive chapters on amelioration in manufacturing and industrial engineering technologies with an emphasis on Industry 4 0 This book sheds light on progress in the field of manufacturing and industrial engineering in terms of enhancement in productivity quality and sustainability It exhaustively covers the recent developments latest trends research and innovations that are currently being carried out Furthermore this title discusses 3D printing green manufacturing computer integrated manufacturing cloud manufacturing intelligent condition monitoring advanced forming automation supply chain optimization and advanced manufacturing of composites This book also presents Industry 4 0 based technologies for mechanical and industrial engineering with both a theoretical and a practical focus Manufacturing and Industrial Engineering Theoretical and Advanced Technologies is written for students researchers professors and engineers working in the fields of manufacturing industrial engineering materials science and mechanical engineering Tailoring of Engineering Material Properties through Laser Cladding Natarajan Jeyaprakash,Govindarajan Prabu,Che-Hua Yang,2025-05-13 In this comprehensive guide to laser cladding of engineering materials expert contributors provide a detailed yet easy to follow explanation of the process its use for surface modification and the benefits and applications of this technique in different environments and for different purposes The optimization of an engineering material s properties and behavior is vital for economic safety and quality assurance reasons when these materials are applied in various industrial settings This book therefore explains how laser cladding can be used to tailor and

control a material's surface layer properties such as its elastic and plastic deformation and permanent detachment in the form of debris during the contact of mating parts. Through individual chapter contributions from experts in various elements related to laser cladding, this book guides readers through the evaluation of different structures in laser clad engineering materials. The book addresses three key questions: What is the influence of micro and nano level structures on mechanical properties? How does laser cladding improve a material's wear resistance at the micron and nano level and determine the material's suitability for particular applications? What challenges are related to the laser cladding of different engineering materials? In addressing these questions, the book enables readers to determine the metallurgical, mechanical, tribological, and corrosion behavior of any type of engineering material. Readers will also be able to make informed decisions based on their knowledge of the properties and industrial applications of different laser clad materials. This book is essential for all manufacturing industry personnel who work with materials in various industrial settings and need to control their surface properties and enhance their behavior at the micron and nano levels. Students who are building experience prior to entering industry will also benefit from the detailed descriptions, step by step approach, and focus on practical application. **Wear of Materials** American Society of Mechanical Engineers, 1991. *Solid Particle Erosion and Erosion-corrosion of Materials* Alan V.
