

### Oxidation Number Exercise

Do not hand in this work sheet. When you are ready, you will be given an examination over this material. Complete the examination by yourself and hand it in to receive credit.

**Purpose:** This exercise is designed to teach the student how to assign oxidation numbers. Oxidation numbers are very important and are used for 1) naming compounds, 2) balancing oxidation-reduction reactions, 3) calculations in electrochemistry and other areas of chemistry.

**Rule 0** The following rules are in the form of a hierarchy, that is, the first stated rule takes precedence over subsequent rules if a conflict arises.

**Rule 1** The oxidation numbers for all the atoms in a neutral molecule must add up to 0. Similarly, the oxidation numbers for all the atoms of an ion must add up to the charge of the ion. (You are expected to recognize polyions. For the common polyions, know their charges and their names. A summary of the common polyions appears at the end of this exercise. The first step is, always, to determine what polyions are present.)

**Rule 1a** The oxidation number of elements in the elemental form is 0. (Note - this rule is a direct consequence of rule 1. How so?)

**Rule 1b** The oxidation number of any monatomic ion is the same as its charge. (See comment in 1a.)

**Exercises - Give the oxidation number for the following atoms:**

O<sub>2</sub> O = 0

F<sub>2</sub> F = 0

S<sub>8</sub> S = 0

Cl<sub>2</sub> Cl = 0

N<sub>2</sub> N = 0

Al Al = 0

Co<sup>2+</sup> Co = +2

Mn<sup>2+</sup> Mn = +2

Cl<sup>-</sup> Cl = -1

Cr<sup>3+</sup> Cr = +3

I<sub>3</sub><sup>-</sup> I = -1/3

Hg<sub>2</sub><sup>2+</sup> Hg = +1

**Chemical Pedagogy** Keith S Taber, 2024-12-20 How should chemistry be taught in schools colleges and universities Chemical Pedagogy discusses teaching approaches and techniques the reasoning behind them and the evidence for their effectiveness The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching These accounts are supported by an initial introduction to some key ideas and debates about pedagogy the science of teaching Chemical Pedagogy discusses how teaching innovations can be tested to inform research based practice Through this book the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of

some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience
