Oxidative Stress And Redox Regulation:

Oxidative Stress and Redox Regulation Ursula Jakob, Dana Reichmann, 2013-03-15 Many physiological conditions such as host defense or aging and pathological conditions such as neurodegenerative diseases and diabetes are associated with the accumulation of high levels of reactive oxygen species and reactive nitrogen species This generates a condition called oxidative stress Low levels of reactive oxygen species however which are continuously produced during aerobic metabolism function as important signaling molecules setting the metabolic pace of cells and regulating processes ranging from gene expression to apoptosis For this book we would like to recruit the experts in the field of redox chemistry bioinformatics and proteomics redox signaling and oxidative stress biology to discuss how organisms achieve the appropriate redox balance the mechanisms that lead to oxidative stress conditions and the physiological consequences that contribute to aging and disease

Oxidative Stress and Redox Regulation in Plants , 2009-10-09 The field of redox is rapidly changing specifically in relation to plants where redox reactions are exacerbated compared to non photosynthetic organisms The development of proteomics has allowed the identification of hundreds of molecular targets of these systems and the recent discovery of glutaredoxin s ability to bind iron sulfur centers ISCs and to participate in ISC assembly in other apoproteins has provided many new insights This volume presents new research on oxidative stress in plants ranging from the production of reactive oxygen species or reactive nitrogen species to their accumulation their involvement in signal transduction and their degradation while also covering the links among oxidative stress and biotic and abiotic stresses Cutting edge reviews written from a broad range of scientific perspectives For over 40 years series has enjoyed a reputation for excellence Contributors internationally recognized authorities in their respective fields *Redox Regulation of Cell Signaling and Its Clinical*

Disease John F. Keaney Jr.,1999-12-31 One of the major biomedical triumphs of the post World War II era was the definitive demonstration that hypercholesterolemia is a key causative factor in atherosclerosis that hypercholesterolemia can be effectively treated and that treatment significantly reduces not only coronary disease mortality but also all cause mortality Treatment to lower plasma levels of cholesterol primarily low density lipoprotein LDL cholesterol is now accepted as best medical practice and both physicians and patients are being educated to take aggressive measures to lower LDL We can confidently look forward to important decreases in the toll of coronary artery disease over the coming decades However there is still uncertainty as to the exact mechanisms by which elevated plasma cholesterol and LDL levels initiate and favor the progression of lesions There is general consensus that one of the earliest responses to hypercholesterolemia is the adhesion of monocytes to aortic endothelial cells followed by their penetration into the subendothelial space where they differentiate into macrophages These cells and also medial smooth muscle cells that have migrated into the subendothelial space then become loaded with multiple large droplets of cholesterol esters the hallmark of the earliest visible atherosclerotic lesion the so called fatty streak This lesion is the precursor of the more advanced lesions both in animal models and in humans Thus the centrality of hypercholesterolemia cannot be overstated Still the atherogenic process is complex and evolves over a long period of time

Hydrogen Peroxide Metabolism in Health and Disease Margreet C M Vissers, Mark Hampton, Anthony J.

Kettle, 2017-10-19 Much of the biology of oxidative stress and oxidative signalling centres on the generation and handling of hydrogen peroxide The overall aim for this book would be to provide an insightful and useful forum to assist with the understanding of the relevance of hydrogen peroxide generation and how this is managed in human biology The target audience would be those who currently have an interest in the generation of ROS but who do not have expertise in chemistry as well as those experts in the chemistry of oxidative stress but without detailed understanding of the biologically relevant setting We would aim to bridge the gap in understanding between chemistry and biology
