Diabetes Shamim I. Ahmad, 2013-04-12 Diabetes is a complex disease and is also one of the most common It is very difficult to reach an accurate estimate for the global prevalence of diabetes since the standards and methods of data collection vary widely in different parts of the world In addition many potential sufferers are not included in the count because according to an estimate about 50% of cases remain undiagnosed for up to 10 years However according to an estimate for 2010 globally there are about 285 million people amounting to 6 4% of the adult population suffering from this disease This number is estimated to increase to 439 million by 2030 if no cure is found The general increase in life

expectancy leading to an ageing population and the global rise in obesity are two main reasons for the increase With the basic platform set Editor presents his views and advice to the readers especially to diabetic patients suffering from T2DM on the basis of his observations and information collected from other diabetics *Prescription or Poison?* Amitava Dasgupta,2011-02-15 From echinacea to ayurvedics this book explains how toxic these remedies are alone or in combination with other widely prescribed drug treatments For example one should avoid most herbal remedies when pregnant because of pesticides and preservatives required in growth and storage of the herbs a widely used herbal antidepressant called kava does damage to the liver most ayurvedic medicines contain unacceptable levels of lead and other heavy metals St John s Wort is not recommended if you are taking a medication for any chronic medical condition Dr Dasgupta explains in simple engaging prose what drug interactions are and why they are dangerous Most educated people see herbal remedies as natural and therefore safe Dr Dasgupta tells us that one of his first pharmacology professors taught him that medicine is just another word for poison and should be treated with the same respect He will present a balanced account of efficacy and safety of herbal medicines with discussion on potentially unsafe and toxic remedies This book will be written in layman s language for the consumer health market but will be based on solid medical research and published reports in the medical literature

Antiviral Agents Laurie Phippen,2015-05-23 The classification antiviral includes anything that destroys viruses or inhibits their ability to grow and reproduce Herbals approach viral infection from two directions They stimulate the immune system to produce more immune cells aiding your body s ability to fight the infection and they act in direct opposition to viruses by inhibiting their ability to grow and reproduce so they cannot survive The first line of defense against viral infection is prevention Disinfecting surfaces with known antiviral cleaners maintaining good health through diet rest and exercise and minimizing exposure to infectious agents is far more effective than any treatment plan in the continued battle against viruses Regardless of the preventative care you take there are always times where treating an infection will be necessary Traditionally viral infection is fought by blending herbals that support the body s own natural defenses with those that act to kill the virus Using a combination that blends both actions helps to minimize the duration and severity of any infection Many herbs and oils act as natural immunostimulant and antiviral agents Some of these natural products work as well as or even better than the products sold in your local pharmacy Some of the items in your local pharmacy are even created based on the chemical constituents of plants you might have growing in your own yard This guide contains antiviral agents that act as both disinfectants for infected air and surfaces and disease fighting agents for the body Both categories eliminate harmful viruses It is important that you read the traditional uses and side effects of each plant and discuss any alternative treatment with a
