Vertical Natural Gas Transportation Capacity, Upstream Commodity Contracts, and EU Competition Law Kim Talus, 2011-01-01 Because the EU depends on a very small number of external suppliers for its natural gas energy security issues inevitably arise In theory competition law should regulate and adjudicate such issues Yet because contracts between EU companies and producers are highly sensitive and politically charged the application of EU competition law to natural gas contracts is far from clear This important book drawing on ECJ case law Commission administrative cases and inquiries and the full range of relevant legal and economic theory provides an extremely valuable and detailed study of how EU competition law can be applied to long term natural gas capacity reservation and commodity contracts Issues and topics such as the following arise in the course of the analysis Third Gas Market Directive provisions Article 102 TFEU cases on strategic under investment pre liberation or legacy gas contracts e g with Algeria and Russia right of first refusal take or pay requirement third party access ownership unbundling effect of elimination of priority access regimes short term trading spot markets and law and economics of vertical restraints Focusing on the foreclosing effect of long term upstream commodity contracts the author recommends restrictions on the use of capacity reservation contracts and analyses the efficacy of security of supply as a competition law defence in cases relating to such contracts **Oil & Gas Production in Nontechnical Language** Martin Raymond, William L. Leffler, 2017 This updated second edition of *Oil Gas Production in Nontechnical Language* is an excellent introduction for anyone from petroleum engineers and geologists new to their careers to financial marketing legal and other professionals and their staffs interested in the industry E P service company personnel

will find it particularly beneficial in understanding the roles played by their clients. Not only does it cover production fundamentals but it backs up to give the necessary upstream background: geology, origins of oil and gas, and ownership and land rights as well as surface operations and even production company strategy development. *Using the Engineering Literature* Bonnie A. Osif, 2016-04-19. With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere. However, there is information and then there is correct, appropriate and timely information. While we might love being able to turn to Wikipedia for encyclopedia-like information or search Google for the thousands of links.

Oil and Gas Journal, 1997. The World Market for Natural Gas Andrea Gilardoni, 2008-07-20. This book is a product of investigations conducted within the Global Utility Research Unit, Guru of Agici Corporate Finance, Milan, Italy. More specifically, it is the result of a project developed by the Observatory on Alliances and Strategies in the Pan-European Utility Market, set up seven years ago with the contribution of Accenture. The project, entitled Pan-European Gas Industry Scenario Truth and Lies, was presented at the 2008 Milan annual international conference. www.agici.it. I would therefore like to thank Luca Cesari, Claudio Arcudi and Massimo Pagella from Accenture for their continued support. The scope of this book is to shed some light on a market that of natural gas, which is highly complex and at the same time of fundamental importance for Europe for at least the next 20 years. We do not intend to build a theory but only to develop a better understanding of the key factors. We fully recognise that each of the issues we cover deserves further investigation and we are also well aware that we may have omitted a number of important considerations and topics. These shortcomings are at least in part justified by the desire to keep the book to a reasonable size for editorial reasons.

India and the Global Game of Gas Pipelines Gulshan Dietl, 2016-11-03. Gas pipelines constitute an important yet unexplored aspect of strategic geography. As one of the fastest growing economies in the world, India's need for energy is paramount. Though surrounded by gas-rich regions: Myanmar and Bangladesh to the east, the Gulf to the west and Central Asia to the north, India does not have a single gas pipeline coming in, going out or traversing through its territory to date. This book highlights the global competition over gas pipelines and its implications for India's energy security in a comprehensive manner. The author leads us through a labyrinthine world comprising numerous actors: the states, energy firms, scientists, engineers, investors and bankers engaged in competition over these pipelines, leading to a continuous game of checkmating rivals, instigating conflicts, causing damage and destruction and threatening military action to persuade or dissuade states from joining specific projects. Pulsating with rigorous, grounded in hard facts and solid research, this book will be indispensable for scholars and researchers of international relations, strategic affairs, defence studies and politics as well as think tanks, government agencies and the informed general reader.
