Natural History A Selection Penguin Classics:

Natural History Pliny the Elder, Pliny (the Elder.), 1991-12-03 Pliny's Natural History is an astonishingly ambitious work that ranges from astronomy to art and from geography to zoology. Mingling acute observation with often wild speculation, it offers a fascinating view of the world as it was understood in the first century AD, whether describing the danger of diving for sponges, the first water clock or the use of asses' milk to remove wrinkles. Pliny himself died while investigating the volcanic eruption that destroyed Pompeii in AD 79, and the natural curiosity that brought about his death is also very much evident in the Natural History, a book that proved highly influential right up until the Renaissance and that his nephew Pliny the younger described as full of variety as nature itself. John F. Healy has made a fascinating and varied selection from the Natural History for this clear modern translation. In his introduction, he discusses the book and its sources, topic by topic. This edition also includes a full index and notes. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

Michelangelo's Puzzle Rebecca Jelbert, 2025-08-07 Michelangelo's Puzzle: Forgery, Star Maps, and the Sistine Chapel will be popular with readers who are interested in art, crime, art history, astronomy, and puzzles. Michelangelo's Puzzle expands on Rebecca's article published in Journal of Art Crime 2019, in which she argued that the Vatican's Laocoön Group was created by Michelangelo as a forged antiquity. Drawing on the traditional link between Laocoön and the constellation of Ophiuchus, Michelangelo was able to depict the famous sculpture within the context of a hidden star map on the Sistine Chapel ceiling. The foreword has been written by Noah Charney, founder of the Association for Research into Crimes against Art (ARCA). This book is unique as it has been written by a professional artist who combines creative insight with rigorous research.

Pliny the Elder: The Natural History Book VII (with Book VIII 1-34) Pliny the Elder, 2015-05-21 Pliny the Elder's Natural History is a vast encyclopaedia surveying natural phenomena from cosmology to biology, medicine to magic. Direct observation, informed speculation, and common knowledge are combined to present a key snapshot of ancient thought and the Romans' perspective on the world around them. Book VII of The Natural History provides a detailed examination of the human animal and is crucial to understanding the work as a whole. In Pliny's eyes, mankind, for whose sake nature was created, represents the basis for which the natural world was founded and structured. As a result, the book provides valuable insight into the extraordinary complex of ideas and beliefs that were current in Pliny's era. One of the most interesting transitions of subject in The Natural History is that from man to animals between Books VII and VIII, and for this reason, the section on elephants at the beginning of Book VIII is included here to show how Pliny moves on to his account of the animal he considers nearest to the human disposition. This edition provides the full Latin text accompanied by

commentary notes that provide linguistic help and explanations plus vocabulary lists of Latin terms and an index of proper names The in depth introduction provides valuable details about the work s historical scientific and literary context as well as an overview of the work s legacy and reception *The Heart of the Wild* Joel Berger,Susan Clayton,2024-08-13 How do we keep a love of nature and the wild alive in our increasingly human dominated world According to the scientists and writers in this book doing so is of paramount significance however the answer is not necessarily blanket preservation of wild places which is increasingly unrealistic Rather the answer to how to care for nature is more nuanced and often entails acceptance of a broader definition of wild as well and what it means to experience nature This book will be divided into two parts In the first part authors will explore and complicate what wildness means For example science writer Emma Marris argues that spontaneous vegetation and free roaming animals in cities actually possess more autonomy than the wolves or pines of Yellowstone biologist Jonathan Losos asks whether invasive species are necessarily detrimental and may even play a role in restoring ecosystems and psychologist Susan Clayton discusses new ways of experiencing nature particularly via technology and what the benefits and limitations may be In the second half of the book essays will reflect on the roles of naturalism natural history and nature education communication in helping us connect with wild species and landscapes at a time when many of those connections have frayed or even lost altogether Provided by publisher
