## **Naturally Tread Softly On The Planet:**

Naturally Vikram Soni, 2015-08-01 Vikram Soni has for many years been a leader in the fight against the destruction of the natural environment in his home country India and elsewhere throughout the planet. In this book he describes some of the exquisite balances which nature has evolved in the course of Earth's four billion year history and makes an eloquent plea for a kind of technology much more respectful and symbiotic with them than what we have today. Antony J Leggett, Winner of the Nobel Prize for Physics 2003. This book presents a refreshingly sane and practical path for humanity to carve out a *modus vivendi* with nature and design a future that is fulfilling for all and destructive for none. Ashok Khosla, Former President International Union for Conservation of Nature and Natural Resources, IUCN President, The Club of Rome. With a Foreword by Daniel Goleman, bestselling author of *Emotional Intelligence*. *Naturally Tread Softly on the Planet* is a survival guide for life on Earth. It is about what we are and how we got here, about what we have been doing and where do we go from here. *Naturally* articulates a living scheme based on the way nature works without any waste. It sets the direction by placing human interventions in the matrix of life on Earth and looks for enlightened solutions on the ground that are not injurious to our world. Drawing examples from far and near, it gathers wisdom to walk in symbiosis with the planet. Combining research with engaging anecdotes, *Naturally* is an accessible and essential book on a subject that is urgently relevant. *Advanced*

*Remote Sensing for Urban and Landscape Ecology* Sk. Mustak, Dharmaveer Singh, Prashant Kumar, Srivastava, 2023-06-23. This book introduces the use of various remote sensing data such as microwave hyperspectral and very high resolution VHR satellite imagery, mapping techniques including pixel and object based machine learning and geostatistical modelling techniques including cellular automata, entropy and land fragmentation. Remote sensing plays a vital role in solving urban and environmental challenges at the landscape level. Globally, more than half of the urban population is facing severe environmental and social challenges, especially those relating to climate change, agricultural land encroachment, green infrastructure and environmental degradation, mobility due to rapid rural-urban transformation and anthropogenic interventions. Mapping and quantification of such threats at the landscape level are challenging for experts using traditional techniques; however, remote sensing technology provides diverse spatial data at a varying scale, volume and accessibility for mapping and modelling, and it also analyses challenges at urban and landscape levels. Together, they address challenges at urban and landscape levels to support the Sustainable Development Goals (SDGs). **Ecology Unleashed: Discovering the**
