intercontinental ballistic missile program that was conceived at the end of the Eisenhower administration as a key
component of the US nuclear strategy of massive retaliation Although its nuclear warhead may have lacked power relative to
that of the Titan II the Minuteman more than made up for this in terms of numbers and readiness to launch making it the
ultimate ICBM Minuteman offers a fascinating look at the technological breakthroughs necessary to field this weapon system
that has served as a powerful component of the strategic nuclear triad for more than half a century With exacting detail
Stumpf examines the construction of launch and launch control facilities innovations in solid propellant lightweight inertial
guidance systems and lightweight reentry vehicle development and key flight tests and operational flight programs all while
situating the Minuteman program in the context of world events In doing so the author reveals how the historic missile has
adapted to changing defense strategies from counterforce to mutually assured destruction to sufficiency Aviation
