O'Mahony, 2012-01-06 The growing use of housing equity to support a range of activities and needs raises complex issues particularly for older owners In an environment in which older owners are pushed towards housing equity transactions to meet income and welfare costs they are required to make choices from a complex and sometimes bewildering range of options The transactions which facilitate the use of home equity as a resource to spend in later life from trading down and ordinary secured and unsecured debt to targeted products including reverse lifetime mortgages home reversion plans and sale and rentback agreements raise important legal and regulatory issues This book provides a contextual analysis of the financial transactions that older people enter into using their housing equity It traces the protections afforded to older owners through the ordinary law of property and contract as well as the development of specific regulatory protections focused on targeted products The book employs the notion of risk to highlight the nature and causes of the situational vulnerabilities to which older people are now subject as consumers of housing equity showing that the older owner's personal situation is crucial in determining whether and why they may seek to release equity the options and products available to them and the impact of harms resulting from adverse transactions The book critically evaluates the extent to which this context is incorporated in the legal frameworks through which these transactions are governed as a measure of the appropriateness of existing legal provision as well as considering the arguments surrounding special protection for older owners in housing equity transactions

Ethology and Human Development John Archer, 1992-01-01 The developmental origins of human behavior are often seen as having parallels with the natural world of animal behavior. Researchers in ethology, the biological study of animal behavior, have amassed an enormous body of research, but the psychological study of child development has often ignored the findings, with the notable exception of John Bowlby's use of imprinting as a basis for a novel theory of human attachment. The author of this new book, a psychologist who has carried out research in ethology, evaluates the impact of several decades of ethological work on developmental psychology. He views human development from the context of the natural world, thereby re-establishing the links begun with Charles Darwin between research on child development and animal behavior. Chapters summarize important research on observational methods, animal models, social processes, sociobiology, the comparative method, non-verbal communication and mental processes.
