**Learning Theory in the Practice of Management Development** Sara Grant, Aharon Kfir, Stephen A. Stumpf, Mary Anne Watson, 1998-05-21 The workplace is the ideal environment for tying together management theory and practice and yet classes in many regular management development programs are conducted away from the work site and class sizes are so large that individual instruction is difficult to achieve In this book the authors seek effective ways to merge theory with workplace practice and advocate the modular preceptor method whereby participants work together in dyads and triads with a preceptor acting as advisor and instructor Unlike traditional management development programs which do not usually lead to behavior changes the modular preceptor model has behavior change as the basic aim Participants can remain at work while experiencing individualized learning developing problem solving skills and acquiring new knowledge which can be immediately applied to work situations Various ways of learning such as passive lecture case study discussion and experiential role playing games sensitivity training are examined No single mode of learning can be comprehensive and adequate for all situations The

authors contend however that experiential learning is most effective for increasing the will and competence to learn and for using what is learned to change manager behavior The purpose of the modular preceptor approach is not to present answers to specific managerial or organizational problems but to help the participant acquire new problem definition and problem solving skills and the confidence to apply them on the job This book also analyzes the contribution of the behavioral sciences to the philosophies and techniques behind management instruction and examines the role of the university in management development and the future direction of MBA programs For anyone concerned with meaningful and effective management development this book is an invaluable resource *Proceedings of IAC in Budapest 2019* Group of Authors,2019-08-22

Behavioral and Social Sciences and Education, Board on Science Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on How People Learn II: The Science and Practice of Learning, 2018-09-27 There are many reasons to be curious about the way people learn and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School* (Expanded Edition) was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children, described principles for the design of effective learning environments, and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

*Developing Reflective Practice* Andy Grant, Judy McKimm, Fiona Murphy, 2017-04-11 The ability to reflect on practice is a fundamental component of effective medical practice. In a sector increasingly focused on professionalism and patient-centred care, *Developing Reflective Practice* is a timely publication providing practical guidance on how to acquire the reflective skills necessary to become a successful clinician. This new title draws from a wide range of theoretical and practical multidisciplinary perspectives to assist students, practitioners, and educators in embedding reflection in everyday activities. It also offers structures and ideas for more purposeful and meaningful formal reflections and professional development. *Developing Reflective Practice* focuses on the developing practitioner and their lifelong learning and the development of professional identity through reflection. Provides practical how-to information for students, practitioners, and educators, including realistic case examples and practice-based hints and tips. Examines and explains the theoretical and conceptual approaches to reflective practice, including its models and frameworks.

*Transforming Learning* Sue Askew, 1998-06-01 This study promotes a model of education which is collaborative and non-hierarchical. While traditional approaches to learning and teaching stress cognitive aspects of development and learning, this text advocates an approach which synthesizes the cognitive, affective, and social dimensions of learning. Revealing personal and social learning as being involved with the whole school experience, the authors support the nature of learning within this radical model and highlight key social values such as equality, respect, and justice.

**Ready to Learn** Anne Michelle Burke, 2010 Embrace play to spark

learning with practical examples activities and resources for using play in the classroom to build skills in literacy math science technology and more      *Design for the Changing Educational Landscape* Andrew Harrison, Les Hutton, 2013-10-15

The whole landscape of space use is undergoing a radical transformation In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide the rise of distributed space In the learning environment the social political economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching and a wide acceptance of the importance of learning as the core of the community resulting in the blending of all aspects of learning into one seamless experience This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces real and virtual that now accommodate the experience of learning and provide pointers towards the creation and design of learning centred communities Part 1 looks at the entire learning universe as it now stands tracks the way in which its constituent parts came to occupy their role assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform It shows that what is required is innovation within the spaces and integration between them Part 2 finds many examples of innovation in evidence across the world in schools the higher and further education campus and in business and cultural spaces but an almost total absence of integration Part 3 offers a model that redefines the learning landscape in terms of learning outcomes mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale By encouraging stakeholders to creating an events based rather than space based identity the book hopes to point the way to a fully integrated learning landscape a learning community
