Reflective Teacher Development in Primary Science Peter Ovens,2005-08-10 Dominant theories about primary science contend that knowledge is the key Ovens challenges this view showing through case studies that inquiry and reflection play a significant part in the learning process This applies to pupils teachers and teacher educators Taking curiosity as a pre condition for good learning Ovens shows that it is possible to increase the desire to learn more and learn better to improve confidence in the ability to inquire to imbue pupils with the courage to seek improvement to place trust in collaborative processes to raise awareness of significant detail and to encourage open mindedness **Primary Science Education in**

East Asia Yew-Jin Lee,Jason Tan,2018-09-26 This edited volume is a state of the art comparison of primary science education across six East Asian regions namely the People s Republic of China Republic of Korea Republic of China Hong Kong SAR Japan and Singapore While news of educational policies classroom teaching assessment and other educational innovations here often surface in the international media this book brings together for the first time relevant information regarding educational systems and strategies in primary science in East Asia Above all it is a readable yet comprehensive survey readers would have an accurate sense of what has been accomplished what has not worked so well and what remains to be done Invited experts in comparative education research and or science education also provide commentary by discussing common themes across the six regions These types of critical synoptic reviews add much value by enabling readers to understand broad commonalities and help synthesize what must surely be a bewildering amount of very interesting albeit confusing body of facts issues and policies Education in East Asia holds many lessons both positive and negative to offer to the rest of the world to which this volume is a timely contribution to the literature Primary Science: Knowledge and

sound advice about likely misconceptions whilst maintaining its focus on explaining the science for teachers Wynne Harlen Professor in Education University of Bristol In a thoroughly revised and updated version this standard reference book provides the background knowledge teachers need in order to plan effective programmes of work and answer children's questions with confidence It is based on the belief that children learn most effectively when they can interpret their own experiences and investigation in scientific terms The content of this book has been guided but not limited by the National Curriculum NC and the detailed requirements for teacher knowledge of the Teacher Training Agency TTA It sets out the facts develops the concepts and explains the theories which pupils at primary level including older and very able children are likely to need in order to understand the observations and investigations they undertake For this edition some new topics have been added in response not only to TTA requirements and ongoing developments in science and technology but also to the queries of children and teachers about observations they find relevant and puzzling Throughout topics are developed in ways which teachers and children can relate to their own experience The text does not assume specialised scientific knowledge and wherever possible explanations and the development of ideas begin and remain firmly in contact with everyday events and observations What is assumed is that readers will be willing to try things out for themselves and think afresh in scientific terms about experiences they and their pupils now take for granted As a work of reference to answer specific questions and clarify ideas or as a resource for planning an effective primary science programme this is an essential book for teachers student teachers and anyone interested in the roots and growth of science education
