**Gaia's Web** Karen Bakker, 2024-04-16 A riveting exploration of one of the most important dilemmas of our time will digital technology accelerate environmental degradation or could it play a role in ecological regeneration At the uncanny edge of the scientific frontier Gaia's Web explores the promise and pitfalls the Digital Age holds for the future of our planet Instead of the Internet of Things environmental scientist and tech entrepreneur Karen Bakker asks why not consider the Internet of Living Things At the surprising and inspiring confluence of our digital and ecological futures Bakker explores how the tools of the Digital Age could be mobilized to address our most pressing environmental challenges from climate change to biodiversity loss Interspersed with ten elegiac enigmatic parables each of which is based on an existing technology Gaia's Web evokes the conundrums we face as the World Wide Web intertwines with the Web of Life A new generation of innovators is deploying digital technology to come to the aid of the planet using spy satellites to track down environmental criminals inviting animals to the Metaverse and biohacking Frankenstein like biobots as environmental sentinels But will they end up doing more harm than good In an engaging take on conservation technology Bakker looks at the digital tech applications to environmental issues from predatory harvesting of environmental data to human bycatch and eco surveillance

capitalism If we address these issues and mobilize digitally mediated forms of citizen science she argues digital tech could help reverse environmental harms and advance environmental sustainability And in the process Big Tech might be transformed for the better With its uniquely broad scope combining insights from computer science ecology engineering environmental science and environmental law Gaia s Web introduces profoundly novel ways of addressing our most pressing environmental challenges mitigating climate change protecting endangered species and creating new possibilities for ecological justice by empowering nonhumans to participate in environmental regulation

Virtual, Augmented Reality and Serious Games for Healthcare 1 Minhua Ma, Lakhmi C. Jain, Paul Anderson, 2014-04-25 There is a tremendous interest among researchers for the development of virtual augmented reality and games technologies due to their widespread applications in medicine and healthcare To date the major applications of these technologies include medical simulation telemedicine medical and healthcare training pain control visualisation aid for surgery rehabilitation in cases such as stroke phobia and trauma therapies Many recent studies have identified the benefits of using Virtual Reality Augmented Reality or

serious games in a variety of medical applications This research volume on Virtual Augmented Reality and Serious Games for Healthcare 1 offers an insightful introduction to the theories development and applications of virtual augmented reality and digital games technologies in medical and clinical settings and healthcare in general It is divided into six sections section one presents a selection of applications in medical education and healthcare management Section two relates to the nursing training health literacy and healthy behaviour Section three presents the applications of Virtual Reality in neuropsychology Section four includes a number of applications in motor rehabilitation Section five aimed at therapeutic games for various diseases and the final section presents the applications of Virtual Reality in healing and restoration This book is directed to the healthcare professionals scientists researchers professors and the students who wish to explore the applications of virtual augmented reality and serious games in healthcare further Invasive and Introduced Plants and Animals Ian D.

Rotherham,Robert A. Lambert,2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate *Mnemonic Ecologies* Sonja K. Pieck,2023-08-29 An exploration of

the Green Belt conservation project between the former East and West Germanies and its relationship to emergent ecosystems trauma and memorialization The first book length scholarly treatment of Germany s largest conservation project the Green Belt *Mnemonic Ecologies* by Sonja Pieck presents a new interdisciplinary approach that effective restoration and conservation of wounded land must merge ecology with memory Since the Cold War s end in 1989 German conservationists

have transformed the once militarized border between East and West Germany into an extensive protected area Yet as forests meadows and wetlands replace fences minefields and guard towers ecological recovery must reckon with the pain of the borderlands brutal past The lessons gained by conservationists here Pieck argues have profound practical and ethical implications far beyond Germany Can conservation help heal both ecological and societal wounds How might conservation honor difficult socioecological pasts Deeply researched and evocatively written this beautiful interdisciplinary investigation into the legacy of war and nature s resurgence blends environmental history ethics geography and politics with ecology and memory studies Amid our rampant biodiversity crisis Mnemonic Ecologies shows why conservation must include humanized landscapes in its purview thus helping to craft a new conservation ethos that is collaborative empathetic and more sensitive to the connections between humans and the places they inhabit

*Restoring Layered Landscapes* Marion Hourdequin, David G. Havlick, 2016 *Restoring Layered Landscapes* brings together historians geographers philosophers and interdisciplinary scholars to explore ecological restoration in landscapes with complex histories shaped by ongoing interactions between humans and nature For many decades ecological restoration particularly in the United States focused on returning degraded sites to conditions that prevailed prior to human influence This model has been broadened in recent decades and restoration now increasingly focuses on the recovery of ecological functions and processes rather than on returning a site to a specific historical state Nevertheless neither the theory nor the practice of restoration has fully come to terms with the challenges of restoring layered landscapes where nature and culture shape one another in deep and ongoing relationships Former military and industrial sites provide paradigmatic examples of layered landscapes Many of these sites are not only characterized by natural ecosystems worth preserving and restoring but also embody significant political social and cultural histories This volume grapples with the challenges of restoring and interpreting such complex sites What should we aim to restore in such places How can restoration adequately take the legacies of human use into account Should traces of the past be left on the landscape and how can interpretive strategies be creatively employed to make visible the complex legacies of an open pit mine or chemical weapons manufacturing plant Restoration aims to create new value but not always without loss Restoration often disrupts existing ecosystems infrastructure and artifacts The chapters in this volume consider what restoration can tell us more generally about the relationship between continuity and change and how the past can and should inform our thinking about the future These insights in turn will help foster a more thoughtful approach to human environment relations in an era of unprecedented anthropogenic global environmental change

**Environment and Society** Magnus Boström, Debra J. Davidson, 2018-06-13 This book offers a critical analysis of core concepts that have influenced contemporary conversations about environment society relations in academic political and civil circles Considering these conceptualizations are currently shaping responses to environmental crises in fundamental ways critical reflections on concepts such as the Anthropocene metabolism risk resilience environmental governance environmental justice and others

are well warranted Contributors to this volume working across a multitude of areas within environmental social science scrutinize underlying worldviews and assumptions asking a common set of key questions What are the different concepts able to explain How do they take into account society environment relations What social cultural or geo political biases and blinders are inherent What actions or practices do the concepts inspire The transdisciplinary engagement and reflexivity regarding concepts of environment society relations represented in these chapters is needed in all spheres of society in academia policy and practice not the least to confront current tendencies of anti reflexivity and denialism

*African Philosophy and Deep Ecology* Kenneth Uyi Abudu, Kevin Gary Behrens, Elvis Imafidon, 2025-07-11 This book investigates African philosophical contributions to the concept of deep ecology which advocates for rethinking human and non human relationships within our ecosystems by promoting the inherent and earned worth of all beings With ecological crises impacting lives around the world this book interrogates deep ecology thinking from African philosophical perspectives highlighting the continent's important ontological epistemological ethical aesthetic and broad philosophical contributions The book investigates issues such as the eco phenomenology of human non human animals relations Ubuntu and the environment the superiorist fallacy environmental belongingness the impact of colonization and modernity on non human trauma the politics of ecological narrative about African places the question of moral status African socialist perspectives the question of degrowth selective subordination biodiversity loss land ethics the ontology of waste and the concept of personhood in relation to global climate and ecological justice Providing a significant intervention in our understanding of the ecological crises and our duties toward ecosystems and the non human other in the twenty first century this book is an important read for researchers advocates and other stakeholders working in the fields of environmental philosophy climate change indigenous studies and African Studies

Environmental Aesthetics Martin Drenthen, Jozef Keulartz, 2014-02-03 Environmental aesthetics crosses several commonly recognized divides between analytic and continental philosophy Eastern and Western traditions universalizing and historicizing approaches and theoretical and practical concerns This volume sets out to show how these perspectives can be brought into conversation with one another The first part surveys the development of the field and discusses some important future directions The second part explains how widening the scope of environmental aesthetics demands a continual rethinking of the relationship between aesthetics and other fields How does environmental aesthetics relate to ethics Does aesthetic appreciation of the environment entail an attitude of respect What is the relationship between the theory and practice The third part is devoted to the relationship between the aesthetics of nature and the aesthetics of art Can art help save the Earth The final part illustrates the emergence of practical applications from theoretical studies by focusing on concrete case studies

*Research Methods in Environmental Law* Andreas Philippopoulos-Mihalopoulos, Victoria Brooks, 2017-11-24 This timely Handbook brings innovative free thinking and radical approaches to research methods in environmental law With a comprehensive approach it brings together key concepts such as sustainability climate change activism education and Actor Network Theory It considers how the Anthropocene subjects environmental law to critique and to the needs of the variety of bodies human and non human that require its protection This much needed book provides a theoretically informed analysis of methodological approaches in the discipline such as constitutional analysis rights based approaches spatial geographical analysis immersive methodologies and autoethnography which will aid in the practical critique and re imagining of Environmental Law Open Codes Guido Nicolosi, 2016-04-26 From a general perspective as well as in scientific practice technology and society are viewed as two distinct entities Related to this view are the assumption that technology and human experience are quite different and unconnected and the idea that

modernity has uprooted de contextualised and disembodied technical rationality Adopting a contrary approach this book represents a theoretical exploration to show that in the domain of technological development there are significant margins for manoeuvre in which to recuperate and valorise human and social action in order to envisage a better democratisation of technology Primary focus is placed on open source as potentially paving the way to a new participatory model of technology This model makes so called technical code an open entity in which it is possible to realise creative processes including those of re appropriation designed to re invent used technologies

### **African Philosophy and Environmental Conservation**

Jonathan Chimakonam,2017-10-04 African Philosophy and Environmental Conservation is about the unconcern for and marginalisation of the environment in African philosophy The issue of the environment is still very much neglected by governments corporate bodies academics and specifically philosophers in the sub Saharan Africa The entrenched traditional world views which give a place of privilege to one thing over the other as for example men over women is the same attitude that privileges humans over the environment This culturally embedded orientation makes it difficult for stake holders in Africa to identify and confront the modern day challenges posed by the neglect of the environment In a continent where deep rooted cultural and religious practices as well as widespread ignorance determine human conduct towards the environment it becomes difficult to curtail much less overcome the threats to our environment It shows that to a large extent the African cultural privileging of men over women and of humans over the environment somewhat exacerbates and makes the environmental crisis on the continent intractable For example it raises the challenging puzzle as to why women in Africa are the ones to plant the trees and men are the ones to fell them Contributors address these salient issues from both theoretical and practical perspectives demonstrating what African philosophy could do to ameliorate the marginalisation which the theme of environment suffers on the continent Philosophy is supposed to teach us how to lead the good life in all its forms why is it failing in this duty in Africa specifically where the issue of environment is concerned This book which trail blazes the field of African Philosophy and Environmental Ethics will be of great interest to students and scholars of Philosophy African philosophy Environmental Ethics and Gender Studies

### **Sustainability and Privilege**

Gabriel Arboleda,2022-05-13 Social design the practice of designing for poverty relief is one of the most popular fields in contemporary architecture Its advocates focusing on the architect s creativity and good intentions are overwhelmingly laudatory while its detractors concerned with the experience of its beneficiaries have dismissed it as an expression of cultural imperialism Placed midway between innocuous celebration and radical critique Sustainability and Privilege highlights the lessons that can be learned from social design s current limitations and proposes a feasible way to improve this practice In this broad ranging account enlivened by fieldwork and case studies Gabriel Arboleda contends that social design s invocation of sustainability often serves to marginalize and displace vulnerable populations through projects that involve experimentation of faulty alternative technologies or that result in so called green gentrification or that impose untoward economic and other burdens Arboleda is

fiercely critical of the way social design has been carried out in impoverished regions of the world most notably in Africa and Latin America In addressing the challenges posed by issues of privilege in social design s use of sustainability the book proposes a new interdisciplinary approach called ethnoarchitecture arguing for a simpler open ended and stakeholder driven process that eliminates the casual imposition of the architect s ideas on vulnerable populations foregrounding the people s voices experience and input in social design practice Tourism Imaginaries Noel B. Salazar,Nelson H. H.

Graburn,2014-06-01 It is hard to imagine tourism without the creative use of seductive as well as restrictive imaginaries about peoples and places These socially shared assemblages are collaboratively produced and consumed by a diverse range of actors around the globe As a nexus of social practices through which individuals and groups establish places and peoples as credible objects of tourism tourism imaginaries have yet to be fully explored Presenting innovative conceptual approaches this volume advances ethnographic research methods and critical scholarship regarding tourism and the imaginaries that drive it The various authors contribute methodologically as well as conceptually to anthropology s grasp of the images forces and encounters of the contemporary world **Place, Space and Hermeneutics** Bruce B. Janz,2017-03-29 This book

analyzes the hermeneutics of place raising questions about central issues such as textuality dialogue and play It discusses the central figures in the development of hermeneutics and place and surveys disciplines and areas in which a hermeneutic approach to place has been fruitful It covers the range of philosophical hermeneutic theory both within philosophy itself as well as from other disciplines In doing so the volume reflects the state of theorization on these issues and also looks forward to the implications and opportunities that exist Philosophical hermeneutics has fundamentally altered philosophy s approach to place Issues such as how we dwell in place how place is imagined created preserved and lost and how philosophy itself exists in place have become central While there is much research applying hermeneutics to place there is little which both reflects on that heritage and critically analyzes a hermeneutic approach to place This book fills that void by offering a sustained analysis of the central elements major figures and disciplinary applications of hermeneutics and place Animal Ethics in the Age of Humans Bernice Bovenkerk,Jozef Keulartz,2016-09-21 This book provides reflection on the increasingly blurry boundaries that characterize the human animal relationship In the Anthropocene humans and animals have come closer together and this asks for rethinking old divisions Firstly new scientific insights and technological advances lead to a blurring of the boundaries between animals and humans Secondly our increasing influence on nature leads to a rethinking of the old distinction between individual animal ethics and collectivist environmental ethics Thirdly ongoing urbanization and destruction of animal habitats leads to a blurring between the categories of wild and domesticated animals Finally globalization and global climate change have led to the fragmentation of natural habitats blurring the old distinction between in situ and ex situ conservation In this book researchers at the cutting edge of their fields systematically examine the broad field of human animal relations dealing with wild liminal and domestic animals with conservation and zoos and with

technologies such as biomimicry This book is timely in that it explores the new directions in which our thinking about the human animal relationship are developing While the target audience primarily consists of animal studies scholars coming from a wide range of disciplines including philosophy sociology psychology ethology literature and film studies many of the topics that are discussed have relevance beyond a purely theoretical one as such the book also aims to inspire for example biologists conservationists and zoo keepers to reflect on their relationship with animals
