Nice Getting Started Sql Hands Beginners:

Getting Started with SQL Thomas Nield, 2016-02-11 Businesses are gathering data today at exponential rates and yet few people know how to access it meaningfully. If you're a business or IT professional, this short hands-on guide teaches you how to pull and transform data with SQL in significant ways. You will quickly master the fundamentals of SQL and learn how to create your own databases. Author Thomas Nield provides exercises throughout the book to help you practice your newfound SQL skills at home without having to use a database server environment. Not only will you learn how to use key SQL statements to find and manipulate your data, but you'll also discover how to efficiently design and manage databases to meet your needs. You'll also learn how to explore relational databases including lightweight and centralized models. Use SQLite and SQLiteStudio to create lightweight databases in minutes. Query and transform data in meaningful ways by using SELECT, WHERE, GROUP BY, and ORDER BY. Join tables to get a more complete view of your business data. Build your own tables and centralized databases by using normalized design principles. Manage data by learning how to INSERT, DELETE, and UPDATE records.

Introduction to Web Mapping Michael Dorman, 2020-01-28 A web map is an interactive display of geographic information in the form of a web page that you can use to tell stories and answer questions. Web maps have numerous advantages over traditional mapping techniques, such as the ability to display up-to-date or even real-time information, easy distribution to end users, and highly customized interactive content. *Introduction to Web Mapping* teaches you how to develop online interactive web maps and web mapping applications using standard web technologies: HTML, CSS, and JavaScript. The core technologies are introduced in Chapters 1-5, focusing on the specific aspects which are most relevant to web mapping. Chapters 6-13 then implement the material and demonstrate key concepts for building and publishing interactive web maps. The book gives an introduction to fundamental web technologies: HTML, CSS, and JavaScript. It covers Leaflet, the popular open-source JavaScript library for building web maps, and describes the GeoJSON

vector layer format and the Ajax technique for loading data Shows how spatial database APIs such as the CARTO platform can be combined with a web map to query and display large amounts of data Introduces client side geoprocessing with the Turf.js JavaScript library for applying spatial operators in the browser Demonstrates a complex web mapping application for collecting crowdsourced data combining Leaflet CARTO and the Leaflet draw plugin Goes over 69 complete code examples and includes 9 solved exercises for building web maps and web pages downloadable code is provided in the online supplement The book is intended for beginners with no background in web technologies or programming Nevertheless some prior experience with computers and programming is beneficial The book can be used for self study or as a textbook in a standard undergraduate Web mapping course in a Geography department intended for students specializing in Geographic Information Systems GIS
