Natural Killer Cells Basic Science And Clinical Application:

Natural Killer Cells Michael T. Lotze, Angus W. Thomson, 2009-11-12 Natural Killer Cells explains the importance of killer cells and how they are produced It mentions that the most likely explanation for killer cell production is that they serve as a complementary system for T cells as a primary defense against viruses However these cells defend against certain viruses only such as herpes viruses and influenza viruses The book also explains the primary functions of killer cells and it discusses how these cells help recognize damaged tissues limit further damage to tissues and regenerate damaged tissues It discusses how these cells mature and develop and it covers the different isolation culture and propagation methods of these cells Furthermore it focuses on the different killer cells that are present in various parts of the human body The book concludes by explaining that natural killer cells are utilized for clinical therapy of malignancies and that they have led to positive outcomes in the field of biology and medicine Provides a broad detailed coverage of the biology and interactions of NK cells for students fellows scientists and practitioners Includes figures histologic sections and illustrations of the ontogeny of NK cells

Stem Cells in Regenerative Medicine Alain A. Vertes, Nasib Qureshi, Arnold I. Caplan, Lee E. Babiss, 2015-09-14 This book is a unique guide to emerging stem cell technologies and the opportunities for their commercialisation It provides in depth analyses of the science business legal and financing fundamentals of stem cell technologies offering a holistic assessment of this emerging and dynamic segment of the field of regenerative medicine Reviews the very latest advances in the technology and business of stem cells used for therapy research and diagnostics Identifies key challenges to the commercialisation of stem cell technology and avenues to overcome problems in the pipeline Written by an expert team with extensive experience in the business basic and applied science of stem cell research This comprehensive volume is essential reading for researchers in cell biology biotechnology regenerative medicine and tissue engineering including scientists and professionals looking to enter commercial biotechnology fields

Vitamin A and Retinoids: An Update of Biological Aspects and Clinical Applications Maria A. Livrea, 2012-12-06 Rapid progress has been made in our understanding of the molecular mechanisms of cell growth and oncogenesis during the past decade Special attention has been given to the presentation of the frequently neglected close correlation between changes in signal transduction and metabolic pathways during oncogenesis This book advances the knowledge of mechanisms regulating metabolism and functioning of vitamin A and offers the most recent results of research on the clinical efficiency of retinoids in skin disorders and cancer The book presents recent findings on the regulation of cell growth in normal and neoplastic tissues by growth factors including hormones and by the activation and inactivation of oncogenes and

tumor suppressor genes respectively It also offers a survey of the molecular and cell biochemistry of retinoids Basic researchers in biochemistry pharmacology and cell biology as well as clinicians will find this book very informative and up to date This book advances the knowledge of mechanisms regulating metabolism and functioning of vitamin A and offers the most recent results of research on clinical efficiency of retinoids in skin disorders and cancer Basic researchers in biochemistry pharmacology cell biology and clinicians will find this book very informative and up to date The chapters organized in six sections are contributed by leading scientists who have been working in the retinoid field for decades Their experience and competence is acknowledged worldwide

Skin Cancer: Basic Science, Clinical Research and Treatment Claus Garbe, Stefan Schmitz, Constantin E. Orfanos, 2012-12-06 In the past two decades considerable interest in skin cancer has developed in the public and scientific communities There may have been several reasons for this The rise in the global incidence of cutaneous cancers New molecular biology techniques resulting in a better understanding of pathogenesis and improved diagnostic procedures The advent of new pathological entities e g the endemic

form of Kaposi's sarcoma. A constantly increasing range of therapeutic modalities providing even more efficacious treatment and management of skin cancers. As N. E. Fusenig describes in the first chapter of this volume, basic research is only beginning to unravel the complex mechanism involved in cellular dedifferentiation and tumor progression. Progress is dearly needed especially in dermatology where the rise in the incidence of epithelial tumors has inflated the overall skin cancer incidence. The incidence of tumors of the skin exceeds that of all other neoplasias in humans with recreational sun exposure being a suspected primary cause. Several studies on the effects of UV radiation have been included at the beginning of this volume. Even the role of long wavelength UV (UVA) has become a focus of research activities. The main concern is that the low carcinogenicity of UVA in comparison to UVB may be outweighed and exceeded in its effects by increased UV A exposure.

e.g. *Military Strategies for Sustainment of Nutrition and Immune Function in the Field*. Committee on Military Nutrition Research, Institute of Medicine, 1999-05-27. Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients. Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection. Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries. Combined stressors may reduce the normal ability of soldiers to resist pathogens, increase their susceptibility to biological warfare agents and reduce the effectiveness of vaccines intended to protect them. There is also a concern with the inappropriate use of dietary supplements. This book, one of a series, examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field. It reviews the impact of compromised nutrition status on immune function, the interaction of health, exercise and stress, both physical and psychological, in immune function and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function. The first part of the book contains the committee's workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops, responses to the Army's questions, conclusions and recommendations. The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as: an introduction to what is known about immune function; the assessment of immune function; the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health.

Molecular Chaperones in Health and Disease. Matthias Gaestel, 2005-09-27. Molecular chaperones are involved in a wide variety of essential cellular processes in living cells. A subset of molecular chaperones have been initially described as heat shock proteins protecting cells from stress damage by keeping cellular proteins in a folding competent state and preventing them from irreversible aggregation. Later it became obvious that molecular chaperones are also expressed constitutively in the cell and are involved in complex processes such as protein synthesis, intracellular protein transport, post translational modification and secretion of proteins as well as receptor signalling. Hence it is not surprising that molecular chaperones are implicated in the pathogenesis of many

relevant diseases and could be regarded as potential pharmacological targets Starting with the analysis of the mode of action of chaperones at the molecular cellular and organismic level this book will then describe specific aspects where modulation of chaperone action could be of pharmacological and therapeutic interest

Vaccines for Cancer Immunotherapy Nima Rezaei, Mahsa Keshavarz-Fathi, 2018-10-17 Therapeutic cancer vaccines represent a type of active cancer immunotherapy Clinicians scientists and researchers working on cancer treatment require evidence based and up to date resources relating to therapeutic cancer vaccines Vaccines for Cancer Immunotherapy provides a reference for cancer treatment for clinicians and presents a well organized resource for determining high potential research areas The book considers that this promising modality can be made more feasible as a treatment for cancer Chapters cover cancer immunology general approaches to cancer immunotherapy vaccines tumor antigens the strategy of allogeneic and autologous cancer vaccines personalized vaccines whole tumor antigen vaccines protein and peptide vaccines dendritic cell vaccines genetic vaccines candidate cancers for vaccination obstacles to developing therapeutic cancer vaccines combination therapy future perspectives and concluding remarks on therapeutic cancer vaccines Introduces the feasible immunotherapeutic vaccines for patients with different types of cancer Presents the status of past and current vaccines for cancer treatment Considers advantages and disadvantages of different therapeutic cancer vaccines Looks at the combination of vaccines and other modalities including immunotherapeutic and conventional methods Analyzes obstacles to development of therapeutic cancer vaccines Gives a view on future perspectives in the application of therapeutic cancer vaccines
