**Innate Immunity: Pattern Recognition and Effector Mechanisms** Uday Kishore, Andrew J. T. George, 2025-08-08 This contributed volume follows up and expands upon Target Pattern Recognition in Innate Immunity 2009 providing a much needed update on an area that has surged to the forefront of medical research in recent years. From the initial idea of pattern recognition on microbial surfaces, innate immunity is now recognized as a key player in human health and disease by virtue of its ability to regulate adaptive immune responses with important physiological and pathological consequences. This book presents cutting edge research and future perspectives on nearly all aspects of innate immunity. Coverage includes cells of the innate immune system, pattern recognition receptors and effector mechanisms, soluble PRRs and humoral factors, immune response to viral, bacterial, fungal and parasitic pathogens, disease mechanisms and comparative studies in non-mammalian innate immunity. It is an excellent introduction to the field for students and state-of-the-art reference for researchers and professionals.

**The Nude Mouse in Oncology Research** Epi Boven, 2018-01-18 The nude athymic mouse (nu/nu) has become generally accepted as a valuable tool to study the biology and therapy of human cancers. This volume presents a critical review of the scientific merits of the animal as a recipient of human tumor tissue transplants. Important information is provided regarding biology, immunology and measures for genetic and microbiological control of the nude mouse. The discussion of transplantation sites and transplantability of human tumor tissue to the animals includes both the description of host factors and the tumor type involved. The characterization and monitoring of xenografts is followed by a review on their possible application for studies in tumor biology such as hormones, growth factors, drug resistance, tumor markers and heterogeneity. Experimental therapy is dedicated to cytostatic agents, hormones, monoclonal antibodies, cytokines, differentiation inducers and radiotherapy. The book also provides critical remarks regarding the limitation of the nude mouse tumor models. *The Nude Mouse in Oncology Research* will provide essential reference information for oncology researchers, researchers who work with the nude mouse on a regular basis and pharmaceutical companies.

**Transcriptional Control of Lineage Differentiation in Immune Cells** Wilfried Ellmeier, Ichiro Taniuchi, 2014-09-02 Insights into the regulation of immune cell lineage differentiation and specification as well as into the control of lineage integrity, stability and plasticity are of fundamental importance to understanding innate and adaptive immune responses. In this volume, leading experts provide an up-to-date and comprehensive overview of recent advances in the transcriptional control mechanisms and transcription factor networks that regulate these processes in a variety of different immune cell lineages. The chapters cover the regulation of T versus B cell lineage choice, discuss early B cell development and pre-B cell leukemia prevention, address transcriptional control mechanisms during the differentiation in regulatory T cells and iNKT cells, detail genomic switches in helper cell fate choice and plasticity and highlight the role of the BTB zinc finger family of transcription factors in T cells. Moreover, the chapters discuss transcriptional networks in DCs, NK cells and in innate lymphoid cells. Together, the reviews illustrate key

transcriptional control mechanisms that regulate the development and function of immune cells and demonstrate the impressive advances made over the last decade      **Cytotoxic Effector Mechanisms** Eckhard R. Podack,2013-03-08

The EU perspective on the monitoring of zoonoses and zoonotic agents and the significance of gastrointestinal problems to poultry farmers. This book will be of interest to researchers in food science and veterinary medicine, decision makers and poultry farmers.      **Immunobiology of Natural Killer Cells**, 1986      *Immunotoxicology and Risk Assessment* Dennis K. Flaherty, 2007-05-08 This authored book presents basic immunological tenets and mechanisms at the cellular and molecular level while employing the toxicology focus on hazard identification, appropriate assays, dose response and risk assessment by mathematical models and safety factors. It will be a useful reference to toxicologists because it will incorporate new guidelines that the EPA is bringing out later this year for all chemicals regulated under the Federal Insecticide Fungicide and Rodenticide Act and the Toxic Substances Control Act. Regulatory sections in each chapter focus on data from both the US Food and Drug Administration as well as data applicable to western European Nations.
