## **Nature Technology And Society The Cultural Roots Of The Current Environmental Crisis:**

**Nature, Technology, and Society** Victor Ferkiss, 1994-11 Traces cultural attitudes toward the environment and technology across the span of human civilization While all human societies have enlisted technologies to control nature the last hundred years have witnessed the technological exploitation and destruction of natural resources on an unprecedented scale As environmental groups and the scientific community sound the alarm about deforestation global warming and ozone depletion the obvious question arises how did we get where we are today In *Nature Technology and Society* Victor Ferkiss sets out to answer this central question arguing that we cannot escape from our present environmental predicament unless we understand the ideas which have created it Ferkiss asks the basic questions concerning humans and their relationship to the environment He traces cultural attitudes towards the environment from early mankind to the present day This fascinating book is distinctive both in its comprehensiveness and in its attempt to place side by side influential thinkers and movements with varied views on these issues

**Nature, Technology, and Society** Victor C. Ferkiss, 1993-01-01 Ferkiss emeritus government Georgetown U delves thoughtfully into how various civilizations and cultures including Western civilization have historically looked at humanity nature and technology He then looks at the conflicting attitudes of contemporary thinkers seeking a balance but maintaining a bias toward reverence for nature and an

**Modern Environmentalism** David Pepper, 2002-06 Examining key environmentalist ideas within their social and historical context this book analyses the diverse views within the science nature debate addresses questions of social change and suggests how to establish the desired ecological society

**Marx and Social Justice** George E. McCarthy, 2017-11-01 In *Marx and Social Justice* George E. McCarthy presents a detailed and comprehensive overview of the ethical political and economic foundations of Marx's theory of social justice in his early and later writings What is distinctive about Marx's theory is that he rejects the views of justice in liberalism and reform socialism based on legal rights and fair distribution by balancing ancient Greek philosophy with nineteenth century political economy Relying on Aristotle's definition of social justice grounded in ethics and politics virtue and democracy Marx applies it to a broader range of issues including workers control and creativity producer associations human rights and human needs fairness and reciprocity in exchange wealth distribution political emancipation economic and ecological crises and economic democracy Each chapter in the book represents a different aspect of social justice Unlike Locke and Hegel Marx is able to integrate natural law and natural rights as he constructs a classical vision of self government of the people by the people

*The Natural and the Artefactual* Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly disrupting our modern industrialized societies Lee argues instead that the process of modernization with its attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact Ultimately what needs to be determined is if nature has value above

and beyond human considerations whether aesthetic spiritual or biological This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories the natural and the artefactual Natural entities be they organisms or inert matter are morally considerable because they possess the ontological value of independence whereas artefacts are created by humans expressly to serve their own interests and ends **Green Justice** Thomas M Hoban, Richard O Brooks, 2018-02-20 In the nine years since *Green Justice* first appeared the field we have come to identify as environmental law has taken a number of twists and turns few of which were foreseen by the authors or so far as they know by anyone else Although this edition attempts to account for many of these changes it continues to emphasize what we believed then and continue to believe to be paramount not only for the study of environmental law but for common law based jurisprudence in general Despite the immediacy and crush of daily events closely reasoned analyses of the difficulties and conflicts arising from environmental conflicts as embodied in major cases or key decisions such as we present here provide a stabilizing core around which the swirl of daily events takes place and against which those events must be evaluated We believed then and believe even more strongly now that this is true not only for legal specialists and scholars but for an educated populace as well Thus this casebook **Uncommon Ground: Rethinking the Human Place in Nature** William Cronon, 1996-10 This collection of essays historicizes the divorce of the natural from the human and shows that nature is a human construction arguing that what we have constructed we can reconstruct **A New Ecological Order** Ștefan Dorondel, Stelu Șerban, 2022-05-03 The rise of industrial capitalism in the nineteenth century forged a new ecological order in North American and Western European states radically transforming the environment through science and technology in the name of human progress Far less known are the dramatic environmental changes experienced by Eastern Europe in many ways a terra incognita for environmental historians and anthropologists *A New Ecological Order* explores from a historical and ethnographic perspective the role of state planners bureaucrats and experts engineers agricultural engineers geographers biologists foresters and architects as agents of change in the natural world of Eastern Europe from 1870 to the early twenty first century Contributors consider territories engulfed by empires from the Habsburg to the Ottoman to tsarist Russia territories belonging to disintegrating empires and countries in the Balkan Peninsula Central and Eastern Europe and Eurasia Together they follow a rhetoric of correcting nature a desire to exploit the natural environment and put its resources to work for the sake of developing the economies and infrastructures of modern states They reveal an eagerness among newly established nation states after centuries of imperial economic and political impositions to import scientific knowledge and new technologies from Western Europe that would aid in their economic development and how those imports and ideas about nature ultimately shaped local projects and policies *Defending Illusions* Allan K. Fitzsimmons, 1999 Fitzsimmons examines the science philosophy and law of ecosystems management and shows how efforts to make federal protection of ecosystems the centerpiece of national environmental policy are driven by

religious veneration of Mother Earth wrapped in a veil of weak science      The Planetary Emergency Kent D. Shifferd, 2021-01-13 Earth and its inhabitants face an unprecedented crisis the human caused destruction of the planet's life support systems Deteriorating climate bringing super storms mass forest fires melting glaciers droughts extreme heat and rising seas a decline in food production soil loss water pollution and declining fisheries all threaten the future of life on earth with a looming extinction event not seen for 60 million years Beginning in the 17th century we developed a civilization based on radical materialism exploitation of natural resources and the myth of endless economic growth For all its technological wonders this hypercivilization has proven unsustainable This book explores ways we can create an ecocivilization compatible with the laws and limits of nature a new way of living already developing with new technologies new forms of social organization and a new story about ourselves and the Earth      **The Johannine World** David J. Hawkin, 1996-01-01 Argues that the Fourth Gospel has political dimensions which offer both meaning and challenge to contemporary Christians

**Researching Education and the Environment** Alan Reid, William Scott, 2007-10-25 Previously published as a special issue of Environmental Education Research this collection includes some of the most influential and important articles contributed to the field over the last decade Drawing out the best articles from volumes one to ten the editors highlight six major themes EE and ESD tension or transition locating the environ      **Environmental Management and Development** Christopher J. Barrow, 2005 The environment and its management has been and continues to be a very topical issue Existing environment and development texts place emphasis is on listing problems making warnings and voicing advocacy but by focusing on environmental management this informative book offers a very different perspective Moving on from the usual much discussed viewpoints Barrow looks towards practical management and problem solving techniques He clarifies the definition nature and role of environmental management in development and developing countries beginning with an introduction to the key terms issues and tools of environmental management which are linked and developed in later chapters and concluding by discussing who pays for environmental management and its future in developing countries Written by an experienced and well known author this clear user friendly book ideal for students of resource management geography and development studies makes excellent use of chapter summaries boxed case studies annotated further readings and websites discussion questions and illustrations      **Philosophy and Revolutions in Genetics** Keekok Lee, 2016-01-03 The last century saw two great revolutions in genetics the development of classic Mendelian theory and the discovery and investigation of DNA Each fundamental scientific discovery in turn generated its own distinctive technology Biotechnology is the offspring of the latter and is expected to be the driving force behind economic growth in the twenty first century These two case studies enable the author to conduct a philosophical exploration of the relationship between fundamental scientific discoveries on the one hand and the technologies that spring from them on the other As such it is also an exercise in the philosophy of technology      **Global Climate Change** Sharon L. Spray, Karen Leah McGlothlin, 2002 This

collection of essays is designed to introduce students to the topic of global climate change from multidisciplinary perspectives. The contributors approach the topic with the belief that the more knowledgeable students are about the topic, the better equipped they will be for meeting the challenge of changing global climate.

**The Light-Green Society** Michael Bess, 2003-11-15 The accelerating interpenetration of nature and culture is the hallmark of the new light green social order that has emerged in postwar France, argues Michael Bess in this penetrating new history. On one hand, a preoccupation with natural qualities and equilibrium has increasingly infused France's economic and cultural life. On the other, human activities have laid an ever more potent and pervasive touch on the environment, whether through the intrusion of agriculture, industry, and urban growth, or through the much subtler and more well intentioned efforts of ecological management. The Light Green Society limns sharply these trends over the last fifty years. The rise of environmentalism in the 1960s stemmed from a fervent desire to save wild nature, nature conceived as a qualitatively distinct domain wholly separate from human designs and endeavors. And yet Bess shows, after forty years of environmentalist agitation, much of it remarkably successful in achieving its aims: the old conception of nature as a separate sphere has become largely untenable. In the light green society, where ecology and technological modernity continually flow together, a new hybrid vision of intermingled nature and culture has increasingly taken its place.

**Wildlife in Asia** John Knight, 2004-07-31 Drawing on anthropological and historical data, this book examines human-wildlife relations in China, Tibet, Japan, Bhutan, Indonesia, the Philippines, Malaysia, India, Thailand, and Vietnam. The volume initially focuses on the various ways in which wild animals are exploited as a resource for food, medicine, and crop-picking labour, before examining animals termed as pests or predators that are deemed to be harmful and dangerous. Bringing together anthropologists and historians, this book analyses the range, variability, and historical mutability of human sensibilities towards animals in Asia, and will be of interest to Asianists and anthropologists alike.

Cultural Practices, Political Possibilities Rohee Dasgupta, 2009-03-26 Culture has long been regarded as one of the most complicated concepts in the social sciences, possibly over-theorized. Its ubiquity, tangled senses of particularity, and the almost universal recognition of that assumed particularity require an extended vocabulary for framing the politics embedded in it. *Cultural Practices, Political Possibilities* attempts to explain the political significance and overlaps of cultural constructions as witnessed in global-local clashes, convergences of texts and contexts, within the state and community, identity and the self. Through various case studies, concepts and interdisciplinary perspectives, the multinational group of authors from diverse academic backgrounds interprets cultural constructions of politics as factionalizing, identitarian, situational, and particularistic in their links, affirmations, and consequential divides. Each contribution, in its unique way, explores the performative asymmetries and contradictions witnessed in diverse cultural interactions that shape new areas of political investigation. The book will be welcomed by students of international relations, environmental politics, sociology, anthropology, and cultural studies.

*Nature and Psyche* David W. Kidner, 2001-01-01 Underscores the limitations of traditional psychology to envision

a more healthy ecological and psychological future      *The Bright Dark Ages* Arun Bala,Prasenjit Duara,2016-04-26 The European dark ages in the millennium 500 to 1500 CE was a bright age of scientific achievements in China India and the Middle East The contributors to this volume address the implications of this seminal era of Asian science for comparative and connective science studies Although such studies have generally adopted a binary perspective focusing on one or another of the Asian Chinese Indian Islamic civilizations this study brings them together into a single volume within a wider Eurasian perspective Moreover by drawing together historical philosophical and sociological dimensions into one volume it promotes a richer understanding of how Eurasian connections and comparisons in the millennium preceding the modern era can illuminate the birth and growth of modern science Contributors are Arun Bala Andrew Brennan James Robert Brown George Gheverghese Joseph Henrik Lagerlund Norva Y S Lo Roddam Narasimha Hyunhee Park Franklin Thomas Perkins Hans Pols Kapil Raj Sundar Sarukkai Mohd Hazim Shah Geir Sigur sson and Cecilia Wee
