businesses to the point that a new economy a data driven sector has emerged Many markets such as the social network search engine online advertising and e commerce are regarded as data driven markets in which the utilisation of Big Data is a requisite for the success of operations However the accumulation and use of data brings competition law concerns as they contribute to market power in the online world resulting in a few technology giants gaining unprecedented market power due to the Big Data accumulation indirect network effects and the creation of online ecosystems As technology giants have billions of consumers worldwide data driven markets are truly global In these data driven markets technology giants abuse their dominant positions but existing competition law tools seem ineffective in addressing market power and assessing abusive behaviour related to Big Data This book argues that a novel approach to the data driven sector must be developed through the application of competition law rules to address this It argues that current and potential conflicts can be mitigated by extending the competition law assessment beyond the current competition law tools to offer a modernised and unified approach to the Big Data related competition issues Promoting new legal tests for addressing the market power of technology giants and assessing abusive behaviour in data driven markets this book advocates for cooperation between competition and data protection authorities It will be of interest to students academics and practitioners with an interest in competition law and data protection

Free Imagination Peter Ulric Tse,2024-08-07 Free Imagination argues that the brain s capacity to imagine is the fundamental basis of human Free Will Laws of physics need not apply in our internal simulations so virtually anything is possible there And since some of our actions can follow from that which we imagine especially from processes of deliberation that involve imagining possible scenarios and outcomes our actions inherit the freedom of our imaginings The creative power of the human imagination may have evolved as a consequence of the demodularization of neural circuitry associated with volitional attentional operations over operands downloadable into a mental workspace where virtually anything could be combined with anything else This new cognitive architecture gave rise to the danger of psychosis Our schizotypal form of imagination arising from the promiscuous generative and iterative combination of disencapsulated operators and operands in a mental workspace may have evolved only in humans by exapting from existing motoric and other operations involved in volitional hand dexterity to a domain of

premotoric simulation What we imagine into existence can be used for good or evil Imagination is therefore our greatest tool and weapon When applied to ourselves it allows us the possibility of reimagining and then transforming ourselves in light of second order desires This gives us the ability to choose to become a new kind of chooser in the future Other animals lack this second order Free Will although they can do otherwise they cannot want to become otherwise than they are making them amoral This book explores the idea that because humans in contrast have second order Free Will they can be moral or immoral *Monthly Catalog of United States Government Publications*, 2004 *The International Directory of National*
