Microtubules and Microtubule Inhibitors, 1985 M. de Brabander, Jan de Mey, 1985 The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports David Martín Hidalgo, 2021-08-16

Nowadays assisted reproductive technologies (ARTs) have a pivotal role not only in achieving fertilization in subfertile animals but they are also involved in the management of the herd, decreasing disease spread and even allowing offspring sex selection. Nonetheless, there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties. This Special Issue titled *The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports* and published in *Animals* is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes, mainly focused on farm animals such as horse, pig, bovine, rabbit and ovine species. Thus, the Special Issue covers information from the classical point of view, including comparative studies of different semen extenders to the most advanced technologies of sperm selection by thermotaxis or chemoattractants as well as the improvement of sperm features by red light irradiation. The female and embryo contributions to ART outcomes are also covered, for instance, with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes. In brief, this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve, improve, rescue or even create fertility for domestic farm animals with high economic impact.

Krauchunas, 2022-10-18 *Animal model studies on viral infections* Akio Adachi, Tomoyuki Miura, 2015-03-13

Understanding viral replication and pathogenicity properties in infected individuals is a major mission of animal virology. Animal models are essential to analyze the *in vivo* viral characteristics and to develop countermeasures against viruses. To fight against a wide variety of viruses, basic studies with specific and/or common approaches are required. This Research Topic collects articles that describe studies on numerous virus species at various stages toward animal experiments: i) description/evaluation of new challenges of animal model studies; ii) experimental material/methods for animal model studies; iii) observations for upcoming animal model studies. Numbers of DNA and RNA viruses such as HHV-6, HPV, Ebola virus, HCV, dengue virus, HTLV-1, HIV-1, SIV and measles virus are covered by this special issue, consisting of original research, methods, review, mini-review and opinion articles.
