Organic Chemistry Sudoku

This puzzle involves logical thinking & deduction, where combinations are tested for validity. There are two basic types of puzzles created: (1) numbers (1-9) and (2) symbols (which go into boxes instead of numbers, 1-9). Numbers are also included in symbols. When combinations together with another number, this number can only come from 1-9. Placing logical information and deduction (reasoning with logical rules) can lead to some basic inorganic chemistry. Compare the feeling of completing this puzzle with that of learning reaction mechanisms and spectroscopic analysis. The term "deduction" is often used.

This organic chemistry Sudoku can be solved as a normal Sudoku using the 4 organic functional groups shown on the puzzle. You can only use each functional group once within each row, column, and 3x3 box section.

The 4 functional groups included in this puzzle are alcohol, aldehyde, ketone, and amine. Other functional groups include: alkene, alkane, amide, ether, nitrile, and sulfide.

	Row	Column	Box	Functional Group	Symbol	Number	Row	Column	Box	Functional Group	Symbol	Number
