Ethics and HIV Research Sana Loue, Earl C. Pike, 2007-10-05 This book represents the compilation of efforts by researchers

across the country each of whom is dedicated not only to the prevention and elimination of HIV infection but also to the conduct of research according to the highest ethical principles. The authors of the case studies have graciously agreed to share their experiences in conducting research which raised questions for them and will motivate us to further inquiry and examination. The views that are presented in this text are diverse and readers may or may not agree with the analyses of the editor, authors or the authors of the case studies. We do not aim for agreement among readers but rather the studied analysis of the ethical issues raised in the conduct of HIV research. We clearly emphasize the protection of the individuals participating in such research as well as their communities and view research not as an enterprise undertaken by researchers but rather as a negotiated exchange between researchers, participants and communities that also involves interplay with funding sources, ancillary partners and governments.

Business Process Management Andreas Gadatsch, 2023-05-27. This textbook bridges the gap between business management and organisational methods and their digital implementation because process management increasingly means designing operational tasks. In addition to methodological basics the work offers many practical examples and exercises. Prof Gadatsch's book is now considered the current classic. THE authoritative standard work on IT supported design of business processes. The tenth edition has been revised and adapted to the requirements of the digital transformation. Process management has evolved greatly due to the trend of digitalisation and as a result of the pandemic. Another related trend is the increased use of Data Science methods for process management which has been consequently named Process Science at scientific conferences. Recent research results published under the heading of Explorative Process Management are also of particular importance. They show that the first main phase of process management was rather focused on optimising existing processes and business models. New practical examples were included at various points in the book for example the migration strategies for the ERP system SAP S/4 HANA which is the basis for many industrial and service processes. The chapter on modelling processes was updated and newer methods such as Business Model Canvas were included.
