Organizing The Spontaneous:

Organizing the Spontaneous Wesley Sasaki-Uemura, 2001-05-01 In 1960 millions of Japanese citizens took to the streets for months of protest against the U S Japan Security Treaty Anpo and its forcible ratification by the Kishi government In the decades that followed the Anpo era citizens movements exerted a major influence on the organization and political philosophies of the anti Vietnam War effort local residents environmental movements alternative lifestyle groups and consumer movements Organizing the Spontaneous departs from previous scholarship by focusing on the significance of the Anpo protests on the citizens drive to transform Japanese society rather than on international diplomacy It shows that the movement against Anpo comprised diverse at times conflicting groups of politically conscious actors attempting to reshape the body politic The Organization of Spontaneous Adult Social Play John Robert Bowman, 1983

The Oxford Handbook of Process Philosophy and Organization Studies Jenny Helin, Tor Hernes, Daniel Hjorth, Robin Holt, 2014-05-15 Process approaches to organization studies focus on flow activities and evolution understanding organizations and organizing as processes in the making They stand in contrast to positivist approaches that see organizations and phenomena as fixed static and measurable Process approaches draw on a range of ideas and philosophies The Handbook examines 34 philosophers and social theorists both those commonly linked to

process thinking such as Whitehead Bergson and James and those that are not as often addressed from a process perspective such as Dilthey and Tarde Each chapter addresses the background and context of this thinker their work with a focus on the processual elements and the potential contribution to organization and management research For students and scholars in the field of Organization Studies this book is an entry point into the work of philosophical thinkers and social theorists for whom the world is far from being a solid place Friedrich A. Retrieving Liberalism from Rationalist Constructivism, Volume I Walter B. Weimer, 2022-05-07 This first volume History and its Betrayal traces the development of major themes of liberalism from the increase in human population beyond the limits of the face to face society of tribalism and small groups up until the present day It shows that the principles underlying liberalism are the evolutionary development of social organizations that have resulted from the complexity of human action rather than any conscious design or purpose This book draws out the differences between the classical liberalism dependent upon spontaneous and tacit ordering as a result of evolution and the explicit or conscious or directed version of progressivism It shows that the most important recent developments in the philosophy of rationality and the methodology of scientific research as well as in evolutionary epistemology and the philosophy of biology actually stem from the theories of complex social organization of the moralists such as Hume Ferguson and Smith The book shows clearly that classical liberalism was never refuted indeed no attempt to do so has been offered it has simply been ignored in favour of programs which sound beneficial and soothing but which cannot be instituted without returning to tribalism

Autosolitons B.S. Kerner, V.V. Osipov, 2013-06-29 This monograph is devoted to an entirely new branch of nonlinear physics solitary intrinsic states or autosolitons which form in a broad class of physical chemical and biological dissipative systems Autosolitons are often observed as highly nonequilibrium regions in slightly nonequilibrium systems in many ways resembling ball lightning which occurs in the atmosphere We develop a new approach to problems of self organization and turbulence treating these phenomena as a result of spontaneous formation and subsequent evolution of autosolitons Scenarios of self organization involve sophisticated interactions between autosolitons whereas turbulence is regarded as a pattern of autosolitons which appear and disappear at random in different parts of the system This monograph is the first attempt to provide a comprehensive summary of the theory of autosolitons as developed by the authors over the years of research The monograph is comprised of three more or less autonomous parts Part I deals with the physical nature and experimental studies of autosolitons and self organization in various physical systems semiconductor and gas plasma heated gas mixture semiconductor structures composite superconductors optical and

magnetic media systems with uniformly generated combustion matter distributed gas discharge and electronic systems We discuss feasibility of autosolitons in the form of highly nonequilibrium regions in slightly nonequilibrium gases and semiconductors hot and cold regions in semiconductor and gas plasmas static pulsating and traveling combustion fronts
