Neilson, 2002-07-03 This volume written by a range of international experts covers a wide range of topics involving organic fluorine compounds Each chapter is preceded by a summary and includes extensive illustrations and references The chapters cover atmospheric chemistry application of  $^{19}\text{F}$  NMR partition degradation and transformation naturally occurring organic fluorine compounds toxicology of perfluoroalkanes and phosphorofluoridates and application of aromatic compounds to the elucidation of the mechanism of cytochrome P450 **Naturally Occurring Organohalogen**

**Compounds - A Comprehensive Update** Gordon W. Gribble, 2009-12-02 Despite the long association of organohalogen compounds with human activities nature is the producer of nearly 5 000 halogen containing chemicals Once dismissed as accidents of nature or isolation artifacts organohalogen compounds represent an important and ever growing class of natural products in many cases exhibiting exceptional biological activity Since the last comprehensive review in 1996 Vol 68 this series there have been discovered an additional 2 500 organochlorine organobromine and other organohalogen compounds These natural organohalogens are biosynthesized by bacteria fungi lichen plants marine organisms of all types insects and higher animals including humans These compounds are also formed abiogenically as in volcanoes forest fires and other geothermal events In some instances natural organohalogens are precisely the same chemicals that man synthesizes for industrial use and some of the quantities of these natural chemicals far exceed the quantities emitted by man
