Nanocomposite Structures and Dispersions Ignac Capek, 2019-07-20. Nanocomposite Structures and Dispersions deals with the preparation of gelled, branched, and crosslinked nanostructured polymers in the solution, free radical polymerization, and controlled living radical polymerization, and polymer and composite nanoparticles and nanostructures in disperse systems, the kinetics of direct and inverse disperse polymerizations, microemulsion, miniemulsion, emulsion, dispersion, and suspension polymerization, the bottom up approach, building of functionalized nanoparticles, modelling of radical microemulsion polymerization, the characterization of traditional and non traditional polymer dispersions, the collective properties of nanomaterials, and their bio applications. This book is designed to bridge that gap and offers several unique features. First, it is written as an introduction to and survey of nanomaterials with a careful balance between basics and advanced topics. Thus, it is suitable for both beginners and experts, including graduate and upper level undergraduate students. Second, it strives to balance the colloidal aspects of nanomaterials with physical principles. Third, the book highlights nanomaterial based architectures, including composite or hybrid conjugates, rather than only isolated nanoparticles. A number of ligands have been utilized to biodecorate the polymer and composite nanocarriers. Finally, the book provides an in depth discussion of important examples of reaction mechanisms of bottom up building of functionalized nanoparticles or potential applications of nanoarchitectures ranging from physical to chemical and biological systems. Free radical controlled polymerization, branching, crosslinking, and gelling. Kinetics and mechanism of polymer nanoparticles formation. Modelling of radical polymerization in disperse systems. Polymer composite and metal nanoparticles, nanostructures, and nanomaterials. Smart nanostructures, biodecorated particles, nanocarriers, and therapeutics.

Recent Advances in Application of Synthetic Biology for Production of Bioactive Compounds, volume II Luan Luong Chu, Jae Kyung Sohng, Dipesh Dhakal, Hanhong Bae, 2025-09-10. Bioactive compounds such as polyphenols, flavonoids, terpenoids, alkaloids, carotenoids, stilbenes, and anthocyanins have a great effect on promoting better human welfare as chemical and food additives, agrochemical products, cosmetics, pharmaceuticals, and biofuels. Noticeably, these bioactive compounds contain glycosides, steroids, plant sterols, and peptides. The exploration, biosynthesis, and amplification of potential biological activities of natural and non natural molecules have remained unchanged as one of the most exciting trends in biotechnological products. Most bioactive compounds are usually isolated from plants, microorganisms, marine organisms, and fungi. However, the yield of natural products is usually low and requires time consuming procedures for industrial production. Furthermore, chemical

synthesis is a costly harmful alternative that requires multi step isolation and purification processes Nevertheless plant molecular engineering has significantly improved using industrially preferred microorganisms such as *Escherichia coli* *Saccharomyces cerevisiae* *Corynebacterium* *Bacillus* and *Pseudomonas* These microorganisms are promising alternatives for the biosynthesis of industrial products In recent years a wide variety of novel technologies for engineering plants and microbes has been developed to produce natural and non natural compounds from renewable biomasses Along with evolutionary engineering metabolic engineering and systems biology synthetic biology is expected to further improve the productivity of the synthesis compounds
