On the Time and Temperature Dependent Behaviour of Laminated Amorphous Polymers Subjected to Low-Velocity Impact Andreas Rühl, 2017-04-05 The thesis investigates a polymeric laminate consisting of poly methyl methacrylate PMMA and thermoplastic polyurethane TPU experimentally and numerically with regard to its impact behaviour and applicability After a basic characterization of the monolithic materials PMMA TPU PMMA laminates were subjected to impact loadings at velocities up to 5 m s using threepoint bending and dart impact tests Based on the experimental basis different material models for the Finite Element simulation are presented which are able to capture the time and temperature dependent behaviour of the laminate Final validation experiments consisting of head dummy impacts at 10 m s on automotive side windows were conducted for PMMA and the laminate in order to investigate their applicability as glass substitution products
