**Making Microchips** Jan Mazurek, 1998-12-07 An examination of the environmental and economic implications of the computer microchip industry s exodus from California s Silicon Valley to New Mexico Virginia Ireland and Taiwan In Making Microchips Jan Mazurek examines the environmental and economic implications of the computer microchip industry s exodus from California s Silicon Valley to New Mexico Virginia Ireland and Taiwan Globalization economic restructuring and changing manufacturing processes in this rapidly growing industry present difficult new questions for environmental policy Mazurek challenges the assumptions of U S policies designed to promote the competitiveness of domestic microchip makers She argues that although these initiatives focus on the economic effects of environmental regulation they fail to acknowledge

how economic and organizational changes within the industry collide with and often confound efforts to monitor and manage pollution from chemicals used in microchip manufacturing Despite its reputation as a clean industry microchip manufacturing is fraught with hazards More than sixty dangerous acids solvents caustics and gases are used to make microchips and some of them are suspected to be carcinogens and or reproductive toxins Mazurek describes the environmental by products of chipmaking including soil contamination air and water pollution and damage to human health Applying insights from economic geography to questions of how and where companies organize production she shows how Silicon Valley played a pivotal role in the development of the microchip Pairing federal environmental data with structural and geographic information on the six firms that continue to build wafer fabrication plants in the United States she demonstrates how reorganization and relocation of manufacturing facilities divert attention from trends in toxic emissions and how they complicate public and private efforts to improve the industry s environmental performance In the concluding chapter Mazurek marshals her findings in a broader analysis of the expansion of global manufacturing and the resultant environmental problems Microchip Fabrication, 5th Ed. Peter Van Zant, 2004-05-19 The 1 book in the industry for more than 15 years Utilizing a straightforward math free pathology this is a novice friendly guide to the semiconductor fabrication process from raw materials through shipping the finished packaged device Challenging quizzes and review summaries make this the perfect learning guide for technicians in training NEW chapter on nanotechnology NEW sections on 300mm wafer processing Processes and devices and Green processing Every chapter updated to reflect the latest processing techniques

**the Promise** John T. Kneebone, Eugene P. Trani, 2020-09-22 Founded in Richmond in 1968 Virginia Commonwealth University VCU began with a mission to build a university to serve a city emerging from the era of urban crisis desegregation white flight political conflict and economic decline With the merger of the Medical College of Virginia and the Richmond Professional Institute into the single state mandated institution of VCU the two entities were able to embrace their mission and work together productively In *Fulfilling the Promise* John Kneebone and Eugene Trani tell the intriguing story of VCU and the context in which the university was forged and eventually thrived Although VCU's history is necessarily unique Kneebone and Trani show how the issues shaping it are common to many urban institutions from engaging with two party politics in Virginia and African American political leadership in Richmond to fraught neighborhood relations the complexities of providing public health care at an academic health center and an increasingly diverse student body As a result *Fulfilling the Promise* offers far more than a stale institutional saga Rather this definitive history of one urban setting state university illuminates the past and future of American public higher education in the post 1960s era
