This book also makes it easy to understand complementary testing areas such as flow cytometry, cytogenetics, and molecular diagnostics. Well known authors Bernadette Rodak, George Fritsma, and Elaine Keohane cover everything from working in a hematology lab to the parts and functions of the cell to laboratory testing of blood cells and body fluid cells. Full color illustrations make it easier to visualize complex concepts and show what you'll encounter in the lab. Learning objectives begin each chapter and review questions appear at the end. Instructions for lab procedures include sources of possible errors along with comments. Case studies provide opportunities to apply hematology concepts to real life scenarios. Hematology instruments are described, compared, and contrasted. Coverage of hemostasis and thrombosis includes the development and function of platelets, the newest theories of normal coagulation, and clear discussions of platelet abnormalities and disorders of coagulation. A bulleted summary of important content appears at the end of every chapter. A glossary of key terms makes it easy to find and learn definitions. Hematology hemostasis reference ranges are listed on the inside front and back covers for quick reference. Respected editors Bernadette Rodak, George Fritsma, and Elaine Keohane are
